Environmental Product Declaration

In accordance with ISO 14025 and EN 15804:2012+A2:2019 for:

1000 kg of precast concrete products

CPC 3754-Tiles, flagstones, bricks and similar articles, of cement, concrete or artificial stone

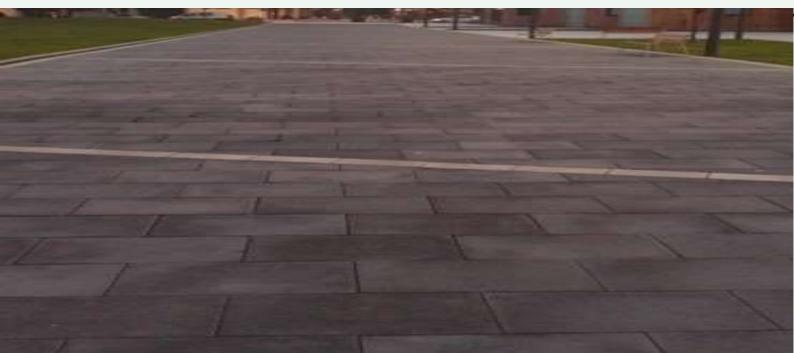

from PREFABRICADOS ETXEBERRIA S.A.

Prefabricados Etxeberria S.A. Pol. Industrial Agote, 9 20740 Zestoa, Gipuzkoa (Spain)

Programme: Programme operator: EPD registration number: Publication date: Valid until: The International EPD[®] System, <u>www.environdec.com</u> EPD International AB S-P-02473 2021-01-20 2026-01-20

An EPD should provide current information and may be updated if conditions change. The stated validity is therefore subject to the continued registration and publication at www.environdec.com

General information

Programme information

Programme:	The International EPD [®] System					
Address:	EPD International AB Box 210 60 SE-100 31 Stockholm Sweden					
Website:	www.environdec.com					
E-mail:	info@environdec.com					
CEN standard EN 158	04 serves as the Core Product Category Rules (PCR)					
Product category rules (PCR): PCR 2019:14Construction products, version 1.1						
PCR review was conducted by: The Technical Committee of the International EPD®System. See www.environdec.com/TCfor a list of members. Review chair: Claudia A. Peña, University of Concepción, Chile. The review panel may be contacted via the Secretariat www.environdec.com/contact.						
Independent third-party verification of the declaration and data, according to ISO 14025:2006:						

 \Box EPD process certification \boxtimes EPD verification

Third party verifier:

Tecnalia R&I Certificacion, SL Auditor: Maria Feced <u>info@tecnaliacertificacion.com</u> Accredited by: ENAC nº125/C-PR283 accreditation.

Procedure for follow-up of data during EPD validity involves third party verifier:

 \boxtimes Yes \Box No

The EPD owner has the sole ownership, liability, and responsibility for the EPD.

EPDs within the same product category but from different programmes may not be comparable. EPDs of construction products may not be comparable if they do not comply with EN 15804. For further information about comparability, see EN 15804 and ISO 14025.

The verifier and the program operator do not have any claim nor have any responsibility of the legality of the product.

Company information

Owner of the EPD: Prefabricados Etxeberria S.A.

<u>Contact person</u>: Enara Etxeberria Manager prefabricadosetxeberria@grupoetxeberria.com

Description of the organisation:

Prefabricados Etxeberria S.A. is a company that has been manufacturing precast concrete elements for more than 35 years. Innovation is one of the main concerns of the staff that makes up Prefabricados Etxeberria. Hence the constant investment, both financially and in human resources, in the search for new construction solutions capable of adapting and satisfying the needs of the construction world, with respect for the environment.

Proof of this are the constant efforts in the search for alternative materials for construction. Currently we replace, depending on the product, between 80 and 90% of natural materials by recycled materials in our products, originating in the iron and steel industry and foundry. We are currently immersed in different projects co-financed by the FEDER and the Basque Government in order to expand the range of materials from other industrial sources.

At the Prefabricados Etxeberria, we are firmly committed to sustainable development. We are aware of the impact of strong economic growth in our environment. We consider that a leading company in this sector is characterized, among other things, by its ability to adapt to the needs of both the market and its environment, whether in social or environmental terms.

In Prefabricados Etxeberria, we are committed to the quality of our products. We define the quality of our products as the strict adjustment of all characteristics and conditions, to the requirements demanded by customers, regulatory and legal. Faithful to these principles, the management takes the responsibility of creating, implementing and maintaining at all levels of the organization, a quality management system based on the application of the ISO 9001:2015 standard.

Name and location of production site: Prefabricados Etxeberria S.A. Pol. Industrial Agote, 9 20740 Zestoa, Gipuzkoa (Spain)

Product information

Product name: Precast concrete products.

Product description:

The products analysed are small-sized precast concrete elements for satisfying a wide array of building and civil engineering applications. Precast concrete is a construction product produced by casting concrete in a reusable mold which iscured in a controlled environment. The concrete is obtained through the homogenization of cement, aggregates, water and additives. The aggeragates used in these products are of recycled origin, from the iron and steel industry and foundry.

- <u>Pavers</u>: Pavers can be placed in heavy traffic locations, parking lots, avenues, streets, esplanades, highways, gardens, and in other urban development architectural applications.
- <u>Kerbs</u>: Kerbs are elements created for road traffic, parking areas and roads, to isolate sidewalks with topsoil, delimitation of different heights, etc.
- <u>Blocks</u>: Concrete blocks are primarily used as a building material in the construction of walls.
- <u>Small vaults</u>: For the execution of slabs.
- Bricks: Used in facades, separation of houses, stairs, elevators, premises, etc.
- <u>Slabs</u>: for the execution of pavements.
- <u>Retaining walls</u>: Hollow blocks for the execution of retaining walls.

<u>UN CPC code</u>: 3754- Tiles, flagstones, bricks and similar articles, of cement, concrete or artificial stone.

LCA information

Declared unit: 1000 kg of precast concrete products.

Reference service life: RSL is not relevant for this EPD.

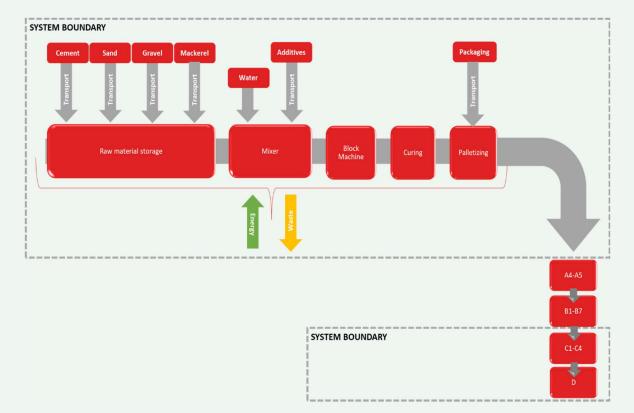

Time representativeness: 2019.

Database(s) and LCA software used:

All the data used to model the process and obtain the Life Cycle Inventory are specific data and have been obtained by measurements made during the year 2019. They are representative of the different processes implemented during the manufacturing process. The data has been measure directly at the company's own premises. In addition, the most complete and highest quality European life cycle inventory database, Ecoinvent 3.6, has been used, as this database contains the most extensive and updated information and its scope coincides with the geographical, technological and temporal area of the project. The LCA was modelled with SimaPro 9.1.1.1.

Description of system boundaries:

Cradle to gate with modules C1–C4 and module D (A1-A3 + C + D). The life cycle stages A4-A5, B1-B7 were excluded from the LCA study.

System diagram:

Manufacturing process:

The choice of raw materials for its manufacture is one of the basic factors for obtaining a good material. The sand, gravel and mackerel are stored outside in piles and are transferred in the plant as they are needed. The cement is stored outside in large vertical silos to protect it from moisture.

The required amounts of sand, gravel, mackerel and cement are transfered by gravity to a weigh batcher. The dosage of its components is carried out with an electromechanical and electronic weighing system.

The dry materials then flow into a stationary mixer. After the dry materials are blended, water and additives are added to the mixer. Once the concrete mix is completely mixedit is dumped into a block machine. In the block machine, the concrete is forced downward into molds. When the molds are full, the concrete is compacted by a press.

The compacted blocks are pushed down and out of the molds onto apallet. The pallet and blocks are pushed out of the machine and onto a chain conveyor.Block pallets are transported to the curing place.

Curing is a very important operation that is carried out, which is called "natural drying" which consists of allowing the material to harden spontaneously without subjecting it to any procedure, putting it in curing chambers, thus avoiding drafts, sudden changes in temperature, maintaining adequate humidity to avoid possible cracks.

Finally the products are strapped and packed in the packing machine and are stored until dispaching.

More information: For more information please visit <u>http://www.grupoetxeberria.com/</u>

<u>Author of the Life Cycle Assessment</u>: IK ingenieria Av. Cervantes 51,Edif. 10, panta 5, dpto. 748970 Basauri, Bizkaia (Spain)

Data quality:

The environmental impact of the steel profiles and accessories has been calculated based on the international standards established for the development of environmental product declarations, such as ISO 14025 for the preparation of the environmental product declaration, ISO 14040 and ISO 14044 for the preparation of the life cycle analysis, UNE-EN 15804:2012+A2:2020 (MARCH 2020) and the Product Category Rules PCR - "2019:14 Construction products " (Version 1.1) of the CPC 3754.

Data has been collected in 2019 and is representative of that year. Data for raw material supply, transport to fabrication plant and production (A1-A3) is based on specific consumption data for the factory at Zestoa. Generic background datasets were used for the upstream and downstream processes. SimaPro v9.1.1.1. software was used to prepare the life cycle analysis together with the Ecoinvent 3.6 database. Characterization factors from EN 15804:2012 + A2:2019.

The geographical coverage is Europe. Technological coverage is typical or average.

Assumptions:

The following assumptionshave been made in this EPD:

- It does not include the manufacturing processes of the capital goods or spare parts and/or maintenance with a life of more than three years.
- The environmental impact of infrastructure for general management, office, and headquarters operations is not included.
- The impact caused by people (common activities, travel for work...) will not be considered.
- The processes associated with fuel production are intrinsically included in the indicators in ECOINVENT's database used in carrying out the LCA.

- The environmental impact of external transport has been calculated using lorries from the ECOINVENT 3.6 database. These lorries have been selected to reflect the most realistic scenario possible.

Cut-off rules:

The standard ISO 14025 and the PCR - "2019:14 Construction products" indicate that the life cycle inventory data should include a minimum of 95% of the total inputs (materials and energy) for each stage. No such cut-off rules have been taken into account in this study.

Allocation:

The consumption of cement and aggregates have been allocated by the total tons of precast concrete products. Likewise, the consumption of energy has been allocated by the power of the machines and the operating hours.

Greenhouse gas emission from the use of electricity in the manufacturing phase:

In 2019 Prefabricados Etxeberria obtained the electricity supply from three different marketers, medium voltage (production of transmission lines, in addition to direct emissions and losses in grid). Therefore, the weighted electricity mix for the analyzed period is as follows:

Electricity mix	Amount	Units
Electricity weighted average	0,310	kg CO ₂ -eq./kWh

LCA Scenarios and additional technical information

Dismantling/demolition (module C1):

Since they are not products with a structural use, the energy consumption of this phase is considered not relevant.

Transport (module C2):

With a collection rate of 100%, the transports are carried out by lorry (EURO 5) over 50 km.

Waste processing (modules C3 and C4):

A recycling ratio of 75,80 % is considered in accordance with the Construction and Demolition Waste Statistics of the autonomous community of the Basque Country. 2018 (https://www.euskadi.eus/web01-

<u>s2ing/es/contenidos/estadistica/amb_res_rcd_2018/es_def/index.shtml</u>), published by the Basque government. The remaining 24,20% is considered to be landfilled. These porcentages are representative of the geographical scope "Europe"

Recyclability potentials (module D):

Module D contains credits from the recycling of precast concrete products in module C3. The precast concrete products are recycled for use in substitution of virgin raw aggregates.

Modules declared, geographical scope, share of specific data (in GWP-GHG indicator) and data variation:
