EPD valid until	2027-06-30

The International EPD System

EPDs within the same product category but from different programmes may not be comparable.

PRODUCT INFORMATION

PRODUCT DESCRIPTION

White Portland slag cement is manufactured according to EN 197, as a binder for the production of white products. The white Portland cement opens thanks to its versatility: new dimensions in design and construction, excellent quality, high strength and aesthetic appearance. Product is supplied in tank trucks (approx. 26 t).

Advantages:

- Suitable for use in summer due to lower heat of hydration
- Low volume changes
- Excellent compatibility with plasticizers

PRODUCT APPLICATION

- Concrete production of medium and higher strength classes and structures of reinforced concrete
- Suitable for the production of transported concrete

PRODUCT STANDARDS

DANUCEM (Slovakia) is certified by the quality management system EN ISO 9001, the environmental management system EN ISO 14001 and the occupational health and safety management system EN ISO 45001.

Products are manufactured according to the European standard EN 197-1 and the related use of CE conformity mark.

PRODUCT INFORMATION

PRODUCT RAW MATERIAL COMPOSITION

Material	Weight %	Post-consumer %	Renewable %	Country region of origin
Clinker	76.24	-	-	SK
Gypsum	4.10	-	-	SK, CZ
Limestone	1.64	-	-	SK
Blast furnace slag	18.02	100	-	SK, CZ

MANUFACTURING PROCESS

SUBSTANCES, REACH - VERY HIGH CONCERN

White cement contains only traces of Cr⁶⁺ and meets the requirements of Regulation No. 275/2004.

PRODUCT LIFE CYCLE

Manufacturing and packaging A1-A3

Cement production is a complex process that begins with mining and grinding raw materials that include limestone and clay, to a fine powder, called raw meal. Raw meal is heated to a sintering temperature in a cement kiln and then a fusion temperature, which is about 1350°C - 1400°C to sinter the materials into clinker. In this process, the chemical bonds of the raw materials are broken down and then they are recombined into new compounds. The result is called clinker. The clinker is ground to a fine powder in a cement mill and mixed with gypsum, limestone and other minor additional constituents to create cement.

Truck transport is carried out by trucks with a capacity of 3.7-7.5 tons and Euro 5 engine.

The environmental impacts considered for the production stage cover the manufacturing of the production materials and fuels used by machines as well as handling of waste formed in the production processes at the manufacturing facilities are included in this stage. The environmental impacts of this stage have been calculated using the most recent data in regard to what applied in the factory. The data is from the year 2020. The study considers the losses of main raw materials occurring during the manufacturing process.

Transport and installation A4-A5

Transportation impacts occurred from final products delivery to construction site cover fuel direct exhaust emissions, environmental impacts of fuel production, as well as related infrastructure emissions. The transportation distance is defined according to PCR. Average distances of transportation from production plant to building site are assumed as 570 km and the transportation methods are assumed to be lorry. Vehicle capacity utilization volume factor is assumed to be 1 which means full load. In reality, it may vary but as role of transportation emissions in total results is small, the variety in load is assumed to be negligible. Empty returns are not taken into account as it is assumed that return trip is used by the transportation company to serve the needs of other clients. Transportation does not cause losses as product are packaged properly.

Product use and maintenance B1-B7

This EPD does not cover the use phase. Air, soil and water impacts during the use phase have not been studied.

Product end of life C1-C4, D

Since cement is an intermediate product, other modules than A1-A3 are not relevant. Therefore this EPD does not cover the end-of-life phase.

Modul A4 - calculation scenario

Parameter	Value
Vehicle type used for transport	EURO 5 truck with a trailer with a load 3.5-7.5 tons
Distance to the construction site	570 km
Capacity utilization (including returns)	100 %
Weight of transported products	7.5 t
Capacity utilization factor	1

LIFE CYCLE ASSESSMENT

LIFE-CYCLE ASSESSMENT INFORMATION

Period data	2020
-------------	------

DECLARED AND FUNCTIONAL UNIT

Declared unit	1 tonne
Mass per declared unit	1 000 kg

BIOGENIC CARBON CONTENT

Product's biogenic carbon content at the factory gate

Biogenic carbon content in product, kg C	0.0
Biogenic carbon content in packaging, kg C	0.0

SYSTEM BOUNDARY

This EPD covers cradle to gate with options scope following modules; A1 (Raw material supply), A2 (Transport), A3 (Manufacturing) and A4 (Transport). As cement is an intermediate product, no other lifecycle phases are included.

System boundary (STN EN 15804+A2)

Product stage			Construction process stage		Use stage							End of life stage				Beyond the system boundaries

Module not declared = MNR

LIFE CYCLE ASSESSMENT

CUT-OFF CRITERIA

The study does not exclude any modules or processes which are stated mandatory in the EN 15804:2012+A2:2019 and RTS PCR. The study does not exclude any hazardous materials or substances.

The study includes all major raw material and energy consumption.

All inputs and outputs of the unit processes for which data is available are included in the calculation. There is no neglected unit process more than 1% of total mass and energy flows. The total excluded input and output flows do not exceed 5% of energy usage or mass.

The life cycle analysis includes all industrial processes from raw material acquisition to production.

ALLOCATION, ESTIMATION AND ASSUMPTIONS

Allocation is made in accordance with the requirements EN 15804+A2 and the PCR.

Allocation is based on annual production rate and made with high accuracy and precision. The values for 1 t of the produced product which is used within this study are calculated by considering the total product weight per annual production.

In the production plant, several kinds of products are produced; since the production processes of these products are similar, the annual production percentages are taken into consideration for allocation. According to the ratio of the annual production of the declared product to the total annual production at the factory, the annual total energy consumption, packaging materials and the generated waste per the declared product are allocated.

AVERAGES AND VARIABILITY

Any average and variation are not considered since this EPD refers to one specific product produced in one production plant.

The International EPD System additional data requirements

Data specificity and GWP-GHG variability for GWP-GHG for A1-A3.

Supply-chain specific data for GWP-GHG	>98%
Variation in GWP-GHG between products	0%

ABOUT THE MANUFACTURER

DANUCEM (Slovakia) a.s. is the largest producer and supplier of building materials - cement, aggregates and ready-mixed concrete and related services in Slovakia. Premium quality cements are produced in DANUCEM cement plants Rohožník and Turňa nad Bodvou. DANUCEM (Slovakia) a.s. has implemented the quality management system EN ISO 9001, the environmental management system EN ISO 14001 and the occupational health and safety management system EN ISO 45001.

For DANUCEM and CRH Company sustainability is the key value and we commit us to the highest standards of environmental management in all our activities. Our management systems are implemented optimally and checked regularly, with respect to the best available practices in this industry. Sharing of knowledge in the DANUCEM Group plays a significant role in this process. Our policy, applied in all our groups, obliges us to:

- to follow all relevant environmental regulations,
- to improve environmental management in order to achieve the best practices,
- to monitor and report on the performance of environmental management in accordance with our policy,
- to maintain open communication and ensure that our employees and contractors carry out their environmental obligations,
- to handle challenges of the climate change proactively,
- to prevent environmental pollution, reduce emissions and optimize the consumption of energy, water and other natural resources,
- to promote sustainable products, processes and new business innovations,
- to develop positive relationships with other parties and to aim to be good neighbours in every community in which we operate.

Background data	This EPD is based on Ecoinvent 3.6 (cut-off) and One Click LCA databases.
LCA software	The LCA and EPD have been created using One Click LCA EPD Generator.

VERIFICATION STATEMENT

VERIFICATION PROCESS FOR THIS EPD

This EPD has been verified in accordance with ISO 14025 by an independent, third-party verifier by reviewing results, documents and compliancy with EN 15804, ISO 14025 and ISO 14040/14044, following the process and checklists of the program operator for:

- This Environmental Product Declaration
- The Life-Cycle Assessment used in this EPD
- The background report (project report) for this EPD

Why does verification transparency matter? [Read more online.](#)

VERIFICATION OVERVIEW

Following independent third party has verified this specific EPD:

THIRD-PARTY VERIFICATION STATEMENT

I hereby confirm that, following detailed examination, I have not established any relevant deviations by the studied Environmental Product Declaration (EPD), its LCA and project report, in terms of

- the data collected and used in the LCA calculations,
- the way the LCA-based calculations have been carried out,
- the presentation of environmental data in the EPD, and
- other additional environmental information, as present

with respect to the procedural and methodological requirements in ISO 14025:2010 and EN 15804:2012+A2:2019.

I confirm that the company-specific data has been examined as regards plausibility and consistency; the declaration owner is responsible for its factual integrity and legal compliance.

I confirm that I have sufficient knowledge and experience of construction products, this specific product category, the construction industry, relevant standards, and the geographical area of the EPD to carry out this verification.

I confirm my independence in my role as verifier; I have not been involved in the execution of the LCA or in the development of the declaration and have no conflicts of interest regarding this verification.
