

## ENVIRONMENTAL PRODUCT DECLARATION

# ECOLEAN® AIR PACKAGES

ECOLEAN PRODUCTION SITE:  
TEDA, CHINA

**ecolean**  
a lighter approach to packaging

IN ACCORDANCE WITH ISO 14025

Date of validity 2028-06-02

Date of publication 2023-06-08

Registration number S-P-09441

Programme:

The International EPD® System

[www.environdec.com](http://www.environdec.com)

Programme operator:

EPD International AB

*An EPD should provide current information, and may be updated if conditions change. The stated validity is therefore subject to the continued registration and publication at [www.environdec.com](http://www.environdec.com).*

# ECOLEAN LIGHTWEIGHT PACKAGING HAS BECOME A HEAVYWEIGHT ARGUMENT

Ecolean was founded in 1996 in Helsingborg, Sweden, and innovation has always been fundamental for Ecolean. The Ecolean concept is to use a minimal amount of raw materials to produce a unique flexible lightweight package, and a filling system for liquid food products.

Ecolean is established on the market as a full system supplier producing both filling machines and lightweight packages. Ecolean presently employs more than 450 people. Ecolean has its headquarter in Helsingborg, Sweden and production sites in Sweden as well as China and

Pakistan. The production of filling machines and manufacturing of packaging material takes place in Helsingborg. The package forming plants in Sweden, China and Pakistan convert the packaging material film into a range of hermetically sealed ready-to-fill packages in a variety of different sizes.

Ecolean has commercial activities in 20 countries, the largest markets being China, Pakistan and Vietnam.

# THE IMPORTANCE OF A LIFE-CYCLE APPROACH

By using the life-cycle approach, Ecolean can identify the areas with the most environmental impact and work to reduce it. The fundamental premise behind the Ecolean production process is the minimisation and efficient use of raw materials and energy, from the very start.

Ecolean believes in using less raw material. Reducing the amount of packaging material used, transported and disposed of, benefits the entire product life-cycle.

The Environmental Product Declaration (EPD) is an independently verified and registered document, based on (LCA) data. By using EPDs in accordance with the international EPD system, Ecolean can communicate the environmental performance of its products in a transparent way.

This EPD follows the Product Category Rules (PCR) for Packaging UN CPC 36490 2019:13, version 1.1, as well as the principles and procedures of ISO 14025:2006. The EPD has been externally verified by an independent verifier approved by the technical committee of EPD International. The environmental impacts of different EPDs can be compared only taking into account all the technical information supporting the declared/functional unit definition as requested by the PCR.

This EPD covers the production of packages for the Chinese, South Korean and Vietnamese markets. The packaging material is produced in Sweden and transported to the Chinese plant where the packages are printed and formed.

# ECOLEAN® AIR UNIQUE, EYE- CATCHING AND CONVENIENT TO USE

200 ml

250 ml

500 ml

Total weight	200 ml	250 ml	500 ml
gram/package	5.5	6.1	12.7
Height (mm)	160	180	200
Width (mm)	113	113	170
Depth (mm)	0.48	0.48	0.56

Ecolean® Air packaging brings healthy, flavourful and exciting food products to people all over the world. Milk and yoghurt of course, but also RTD coffee drinks, kefir and other fermented products have already seen the inside of an Ecolean® Air package.

Ecolean® Air packages are produced at the Chinese plant in three different sizes: 200 ml, 250 ml and 500 ml. The complete scope of the Ecolean® Air product portfolio also includes 450 ml, 1000 ml and 1500 ml, but these sizes are not produced at the Chinese plant and are thus not included in this report.

## PRODUCTION PLANT CERTIFICATES

**Packaging material and packaging forming production, Sweden:**  
ISO 14001, BRC Packaging, ISO 22000, Halal, FDA/IMS

**Packaging forming production, China:**  
ISO 9001, ISO 14001, ISO/FSSC 22000, QS-Mark

### Ecolean® Air

The package format is a stand-up pouch, with a multilayer structure. The Ecolean® Air package is produced in a three step process. First, a multilayer film is produced in a co-extrusion process at Ecolean's manufacturing plant in Sweden. The film is then shipped by boat to the converting plant in China, where the film is printed. In the final step, the film is folded and converted into hermetically sealed, ready-to-fill packages on reels. At the customer site, these reels are inserted into an Ecolean filling machine and filled with liquid food products.

### Materials

The packages are made of polyolefins (PE, PP) and dolomite.

All raw material used are of food grade quality. The packages are free from substances of very

high concern (SVHC). The products contains no substances from the REACH Candidate list (of 17.01.2023). The packaging material does not contain any biodegradable materials.

### Certifications

The Certification to the Standard verifies technical performance, assists manufacturers' fulfilment of legal obligations, and helps provide protection to the consumer. Ecolean production and products are in compliance with relevant legislation.

ISO/FSSC 22000 specifies requirements for a food safety management system where an organisation in the food chain needs to demonstrate its ability to control food safety hazards in order to ensure that food is safe at the time of human consumption.

## MATERIAL COMPOSITION

# ENVIRONMENTAL PRODUCT DECLARATION

This EPD's boundary is cradle to grave.

## Upstream

The upstream processes include all production for raw materials used in the packaging production. The upstream process is identical for all markets analysed.

## Core

The core processes include transportation of raw materials to the Ecolean site in Helsingborg, Sweden, where the packaging material film is manufactured. The film reels are covered by plastic wrapping and placed on wooden pallets. The film reels are transported by boat from Helsingborg harbour to Tianjin harbour, China. The material is transported by truck to the Ecolean package forming plant in TEDA, Tianjin. Here the film is printed and formed into packages before the ready-to-fill packages are wound on reels. The core process also includes waste treatment for production waste and impacts due to the production of the electricity and fuels used in the production process.

Amounts of raw materials and energy consumption, as well as transport distances have been taken directly from the production sites of Ecolean, Sweden and China, in 2021. Other site specific data from the Ecolean sites in Sweden and China, has been used for the converting process (biogas, chemicals and water) and refers to year 2021. Since 2017, Ecolean has sourced renewable hydropower electricity for its production plants in Sweden, and renewable biogas for production heating processes at the Helsingborg plant through a Guarantee of Origin. Since 2020, Ecolean has purchased renewable energy by buying International Renewable Energy Certificates (I-RECs) also for the production site in China. Database data from the Sphera LCA for experts 2023.1 software has been used for the production of electricity (Swedish electricity from hydropower 14.2 g CO<sub>2</sub>-eq/kWh and Chinese electricity, assumed equal to Japanese electricity from wind 16.3 g CO<sub>2</sub>-eq/kWh). Chemicals (ink, etc.) are used in minimal amounts. The core process is identical for all markets analysed.

Infographics showing the boundaries and stages in the described LCA process.

**Downstream**

The downstream processes include transport of the ready-to-fill packages to a customer, where the filling of the product takes place. At the customer site (a dairy or beverage producer) the packages enter an Ecolean filling machine for chilled products. The packages are cut open, filled with the product and sealed in the machine. The impact from the production of the filled product, (e.g. milk, juice, etc.) is not part of the scope for this EPD.

Data for the filling process (the consumption of electricity, steam, chemicals and water) is based on direct measurements, provided by Ecolean (2020). For the production of the energy and chemicals used in the filling process, database data from the Sphera LCA for experts 2023.1 software has been applied.

The downstream processes also include transport from the filling site to a distribution centre and finally packaging end-of-life.

The end-of-life scenario for the flexible plastic packages depends on local conditions. The package should be sorted and recycled as plastic packaging when appropriate system is available, or sent for energy recovery depending on local systems. The last option would be landfill. The package can be recycled, used for injection moulding into some plastic details. In line with the PCR, only the transport to the recycling site is taken into consideration.

***The Chinese market***

For the transport of the packages to Ecolean's customers, 1,200 km by truck has been applied. This is an estimation which should represent an average for a customer in China. The Chinese electricity mix corresponds to a GWP-factor of 804 g CO<sub>2</sub>-eq/kWh. For the transport of the filled packages for distribution, an estimated distance of 150 km was used. The weight of the product (e.g. milk, juice, etc.) was not included.

The mix of incineration, material recycling and landfill for the primary packaging depends upon the market. Due to lack of available data, the mix for China has been based on global statistics (Ellen MacArthur Foundation). The assumptions made for the end-of-life are 14% incineration, 14% recycling and 72% landfill.

***The South Korean market***

For the transport of the packaging to Ecolean's customers, 1,274 km by ship and 400 km on truck has been applied as an estimation. The South Korean electricity mix corresponds to a GWP-factor of 612 g CO<sub>2</sub>-eq/kWh. For the transport of the filled packages for distribution, an estimated distance of 150 km was used. The weight of the product (e.g. milk, juice, etc.) was not included.

The mix of incineration, material recycling and landfill for the primary packaging depends upon the market. Due to lack of available data, the mix for South Korea has been based on global statistics (Ellen MacArthur Foundation). The assumptions made for the end-of-life are 14% incineration, 14% recycling and 72% landfill.

***The Vietnamese market***

For the transport of the packaging to Ecolean's customers, 3,960 km by ship and 65 km on truck has been applied as an estimation. The Vietnamese electricity mix (assumed equal to Thai electricity mix) is used for the filling process and corresponds to a GWP-factor of 583 g CO<sub>2</sub>-eq/kWh. For the transport of the filled packages for distribution, an estimated distance of 150 km was used. The weight of the product (e.g. milk, juice, etc.) was not included.

The mix of incineration, material recycling and landfill for the primary packaging depends upon the market. Due to lack of available data, the mix for Vietnam has been based on global statistics (Ellen MacArthur Foundation). The assumptions made for the end-of-life are 14% incineration, 14% recycling and 72% landfill.

**Geographic scope**

The Upstream and Core processes in this EPD relate to the plants located in Helsingborg, Sweden and TEDA, China. The Downstream process is calculated for three different markets: China, South Korea and Vietnam.

**Functional unit**

The functional unit for this PCR is 1 packaging product unit. The packages are used for liquid food and are filled in an Ecolean filling machine for chilled distribution.

**Cut off criteria**

All raw material inputs and outputs larger than 1% have been included.

## PROGRAMME-RELATED INFORMATION AND VERIFICATION

### Product Category Rules (PCR):

PCR 2019:13 Packaging (1.1), UN CPC 36490.

### Product group classification:

UN CPC 36490

### Reference year for data:

2021

### Geographic scope:

China, South Korea, Vietnam

### The PCR review was conducted by:

The Technical committee of the International EPD® System.

Contact via [info@environdec.com](mailto:info@environdec.com)

### Independent verification of the declaration and data, according to ISO 14025:2006:

EPD Process Certification (internal)  EPD Verification (external)

### Third party verifier:

David Althoff Palm

Dalemarken AB

[david@dalemarken.se](mailto:david@dalemarken.se)

Approved by the International EPD® System

### Procedure for follow-up of data during EPD validity involves third party verifier:

Yes  No

EPDs within the same product category but from different programmes may not be comparable. The environmental impacts of different EPDs can be compared only taking into account all the technical information supporting the declared/functional unit definition as requested by the PCR. The intended use for this EPD is for business to business communication.

## CONTACT INFORMATION

### EPD owner:

Ecolean AB, PO Box 812, SE-251 08 Helsingborg, Sweden

[www.ecolean.com](http://www.ecolean.com)

Contact: Anna Palminger, Chief Sustainability Officer, [anna.palminger@ecolean.se](mailto:anna.palminger@ecolean.se)

The EPD owner has the sole ownership, liability and responsibility of the EPD.

### LCA practitioner:

Ecolean AB, PO Box 812, SE-251 08 Helsingborg, Sweden

[www.ecolean.com](http://www.ecolean.com)

Contact: Anna Palminger, Chief Sustainability Officer, [anna.palminger@ecolean.se](mailto:anna.palminger@ecolean.se)

### Programme operator:

The International EPD® System

EPD International AB, Box 210 60, SE-100 31 Stockholm, Sweden

[www.environdec.com](http://www.environdec.com)
