**General information** 

# **Product**

#### Product description:

Glasroc H Storm is a 9,5 mm thick gypsum-based sheathing board with a water-resistant core and glass fibre mats fully embedded beneath a thin layer of gypsum. It has a water repellent and UV-protective acrylic coating on the exterior face.

Glasroc H Storm is a safe solution for sheathing during construction as well as during the building's lifetime. The board can be exposed to the weather for 12 months which allows greater flexibility in the construction process before the permanent cladding. It has best moisture resistance class, H1, according to standard EN 15283-1:2008, with a water absorption less than 5%. It shows good dimensional stability and demonstrated good mould resistance. During the period of use it is airtight, diffusion open, provides fire protection and good sound insulation. Glasroc H Storm is not designed for indoor use and should not be surface treated. It is available in 900 mm (GHSE 9) and 1200 mm width (GHS 9) for external solutions.

#### Product specification:

Materials	kg	%
Stucco	6.096	80%
Glass fibre mat	0.139	2%
Other additives	1.025	13%
Water	0.340	4%
Total	7.6	100%

#### Technical data:

The weight of the declared unit is 7.6 kg, with a thickness of 9.5 mm

SINTEF Technical approval – TG20251. For more information from the product data sheet, see www.gyproc.no

#### Market:

Norway, Sweden, Denmark and Finland

#### Reference service life, product:

60 years. This 60 year value is the amount of time that we recommend our products last for without refurbishment, and corresponds to standard building design life

#### Reference service life, building:

60 years

### LCA: Calculation rules

#### **Functional unit:**

1 m² of installed Glasroc H Storm™ – Sheathing Board, with a reference service life of 60 years

#### System boundary:

Figure 1 (below) is a flow diagram illustrating the system boundary from A1 - C4. Module D has not been modelled in this EPD. Biogenic carbon has not been included in the system boundary.

Figure 1 - Flow diagram of the life cycle stages from raw material extraction (A1) through to end-of-life

#### Data quality:

Product specific data was collected at the Fredrikstad plant in Norway in 2015. The data has been modelled using the TEAM software. Background data used is from CML 3.9. Ecoinvent v2.2 data is used having been adapted for use in TEAM by Ecobilan

#### **Cut-off criteria:**

All major raw materials and all the essential energy is included. The production process for raw materials and energy flows that are included with very small amounts (<1%) are not included. This cut-off rule does not apply for hazardous materials and substances.

#### Allocation:

The allocation is made in accordance with the provisions of EN 15804. Incoming energy and water and waste production in-house is allocated equally among all products through mass allocation. Effects of primary production of recycled materials allocated to the main product in which the material was used. The recycling process and transportation of the material is allocated to this analysis.

# LCA: Scenarios and additional technical information

The following information describe the scenarios in the different modules of the EPD.

The module A4 refers to transport from the manufacturer all the way through delivery to the construction site. As the product is sold in Norway, Sweden, Denmark and Finland, a weighted average has been applied for transport distances, representing the average journey of a delivery a product to a construction site.

Transport from production place to user (A4)

Туре	Capacity utilisation (incl. return) %	Type of vehicle	Distance km	Fuel/Energy consumption	Value (l/tkm)
Truck	77	26000 kg capacity	1324	<0.01	3
Boat	77	Freight ship	868	<0.01	3

The module A5 refers to installation of the functional unit of the product into the building using the auxilliary materials below:

#### Assembly (A5)

	Unit	Value							
Screws	per m <sup>2</sup>	8							
Jointing tape	m per m <sup>2</sup>	1.23							
Jointing compound	kg/m <sup>2</sup>	0							
Material loss	%	5							

B1 - B7 - all modules in this phase have been assessed, but it is assumed that no maintainance, repair, replacement or refurbishment of the product will be necessary during the reference service life. Therefore, no impacts are associated with this stage.

# Use phase (B1 - B5)

	Unit	Value
B1 - use		
B2 - maintainance	kg	0
B3 - repair	kg	0
B4 - Replacement	$m^3$	0
B5 - Refurbishment	kWh	0

# Operational energy (B6) and water consumption (B7)

	Unit	Value
Not relevant		

The end-of-life stage includes C1, de-construction, demolition, C2, transport to waste processing, C3, waste processing for reuse, recovery and/or recycling, C4, disposal, including provision and all transport, provision of all materials, products and related energy and water for reuse. The present scenario has been established via contact with relevant stakeholders.

## End of Life (C1, C3, C4)

	Unit	Value
Hazardous waste disposed	%	0
Collected as mixed construction waste	%	0
Reuse	%	0
Recycling	%	56
Energy recovery	%	2
To landfill	%	42

## Transport to waste processing (C2)

Туре	Capacity utilisation (incl. return) %	Type of vehicle	Distance km	Fuel/Energy consumption	Value (I/t)
Truck	77	26000 kg capacity	32	0.09	3

# LCA: Results

Description of the system boundary (X = Included in LCA, MND = Module Not Declared, MNR = Module Not Required). MND is synonymous with MNA (Module Not Assessed). Where a dash is present in the results table, the indicator has not been assessed. All results are per functional unit, which is 1 m² of installed Gyproc® Normal – Standard Plasterboard, with a reference service life of 60 years. CML has been used as the impact model. Specific data has been supplied by the plant, and generic data come from the DEAM and Ecoinvent databases.

All emissions to air, water, and soil, and all materials and energy used have been included, with the exception of long-term emissions (>100 years).

Syste	System boundaries (X=included, MND= module not declared, MNR=module not relevant)

# **Additional Norwegian requirements**

# Greenhous gas emission from the use of electricity in the manufacturing phase

The electricity mix used for these calculations was a dataset from Ecoinvent v2.2 and was specific to Norway. The dataset includes import, production of transmission lines, direct emissions and losses in the grid.

Data source	Amount	Unit
Econinvent v2.2 (june 2010)	13.8	g CO <sub>2</sub> -eqv/kWh

#### **Dangerous substances**

<b>7</b>	The product contains no substances given by the REACH Candidate list or the Norwegian priority list
	The product contains substances given by the REACH Candidate list or the Norwegian priority list that are less than 0,1 % by weight.

- ☐ The product contain dangerous substances, more then 0,1% by weight, given by the REACH Candidate List or the Norwegian Priority list, see table.
- □ The product contains no substances given by the REACH Candidate list or the Norwegian priority list. The product is classified as hazardous waste (Avfallsforskiften, Annex III), see table.

#### Indoor environment

The product meets the requirements for low emissions (M1) according to EN15251: 2007 Appendix E.

#### **Carbon footprint**

Carbon footprint has not been worked out for the product.
