VALID UNTIL 2026/11/21

PROGRAMME

The International EPD® System www.environdec.com PROGRAMME OPERATOR

EPD International AB

This EPD has been developed in conformity to ISO 14025. An EPD should provide current information and may be updated if conditions change. The stated validity is, therefore, subject to the continued registration and publication at www.environdec.com.

1. Brand and product

THE BRAND WASA

Founded in 1919 Wasa is the largest crispbread baker in the world. Using only a few simple ingredients the crispbreads are baked to deliver a distinctive crunch. Wasa has 2 bakeries, in Filipstad (Sweden) and Celle (Germany) and the products are sold in over 40 markets all over the world. Since 2018 Wasa is reducing, calculating and compensating its remaining emissions from field to shelf making it a 100% carbon compensated brand. In 1999 Wasa became part of the Barilla Group. Read more at *www.wasa.com*

PLANT AND PROCESS

Delicate Crisp Rosemary & Seasalt is baked in Filipstad plant where a typical bakery process takes place. The raw materials included in the recipe are mixed together into dough and baked in specific ovens. Following baking, the products are packaged and shipped to distribution centres for market entry. Delicate Crisp Rosemary & Seasalt comes into 190 g packaging format; it is sold mainly in Europe and it is ready for consumption. More info on <u>www.wasa.com</u>.

2. Barilla group

Passion for quality, continuous pursuit of excellent recipes and ability to combine tradition and innovation are the fundamental ingredients that that have allowed a small shop of bread and pasta, opened in 1877 in Parma, to become an international player in the market of pasta, ready-to-eat sauces, baked goods and crispy breads.

The Group operates in over 100 countries through its brands, which have become the icon of excellence in the food sector, and with 30 production sites, which every year contribute to the production of over 2,099,000 tonnes of products.

With its brands - Barilla, Mulino Bianco, Pan di Stelle, Gran Cereale, Harrys, Pavesi, Wasa, Filiz, Yemina e Vesta, Misko, Voiello, Cucina Barilla, Catelli, Lancia, Tolerant and Pasta Evangelists – promotes a tasty, joyful and healthy diet, inspired by the Mediterranean diet and the Italian lifestyle.

Further information on www.barillagroup.com

Good for You, Good for the Planet

In order to make a concrete contribution to global challenges, over the years, Barilla has developed a thought enclosed in the Good for You, Good for the Planet Mission that guides, step by step and offers people good, safe, nutritionally balanced food, coming from responsible supply chains.

GOOD FOOD means taste, pleasure and a daily gesture of love for the people themselves.

HEALTHY FOOD means selected raw materials and balanced nutritional profiles to support healthy lifestyles.

FOOD SOURCED FROM RESPONSIBLE SUPPLY CHAINS means seeking the best ingredients to guarantee excellent quality, respectful of people, animals and the environment.

A commitment "from field to fork", which has led to the development of initiatives in the various stages of the supply chain and for which all Barilla Group brands contribute through projects aiming to improve the nutritional profile of products, reinforce the sustainability of the production and supply chains and provide transparent communication to consumers.

WASA A 100% CO, COMPENSATED BRAND

The Wasa brand has embarked on a path that has led to the achievement of **100% carbon compensation**, in line with its core values - love of Nature. Progressiveness and promoting a **healthy lifestyle** for present and future generations.

The path includes three steps: **measure**. **reduce** and **compensate**. The path was certified by DNV-GL following the International Standard PAS 2060.

This certification covers both Wasa brand and products.

www.wasaCO2.com

WE MEASURE

All the greenhouse gas emissions arising from Wasa brand activities (from field to shelf) are identified and measured, related to a baseline year (2017).

WE REDUCE

Some measures are taken to reduce the greenhouse gases emissions, like Energy Saving Programs, Green Logistic Projects and purchasing renewable electricity (100% from hydropower sources).

WE COMPENSATE

To compensate the remaining emissions, WASA has chosen to contribute to certified VCS projects. The VCS Program is the world's most widely used voluntary GHG program. Projects developed under the VCS Program must follow a rigorous assessment process in order to be certified. To know more about the projects see www.wasa.com/global/sustainability

3. Environmental performance calculation

The Environmental performance of the product was calculated using the LCA (life cycle analysis) methodology, including the entire production chain, starting from the cultivation of the raw materials until the delivery of the finished product to the retailer.

The study was conducted following the specific product rules published for the EPD System: "CPC code 234 – Bakery products".

The contribution to the environmental impacts brought by generic data is less than 10% in all impact categories.

DECLARED UNIT

Data are referred to **1** kg of product plus the related packaging (the packaging is referred to the **190 grams format**, reported to 1 kg of product).

SYSTEM BOUNDARIES

The processes constituting the analyzed system were organized according to following three successive phases, in compliance with the EPD system's requirements.

4. Raw materials production

CEREAL

ROSEMARY

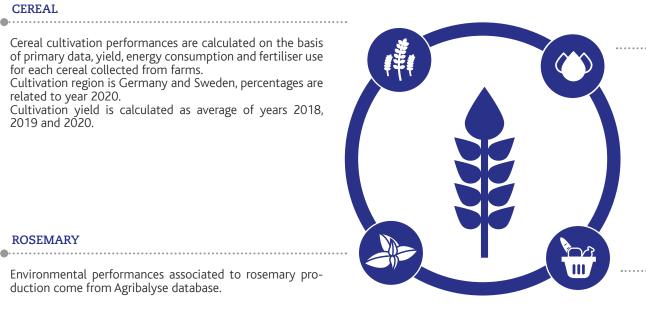

.....

Cereal cultivation performances are calculated on the basis of primary data, yield, energy consumption and fertiliser use for each cereal collected from farms.

Cultivation region is Germany and Sweden, percentages are related to year 2020.

Cultivation yield is calculated as average of years 2018, 2019 and 2020.

Environmental performances associated to rosemary pro-

VEGETABLE OIL

Data for sunflower oil cultivation come from secondary data (collected from Agrifootprint database), the extraction and refinery data come from literature (Nilsson et al. 2010).

OTHER INGREDIENTS

Data from LCA databases are used for other material in the recipe (yeast, salt and flavours).

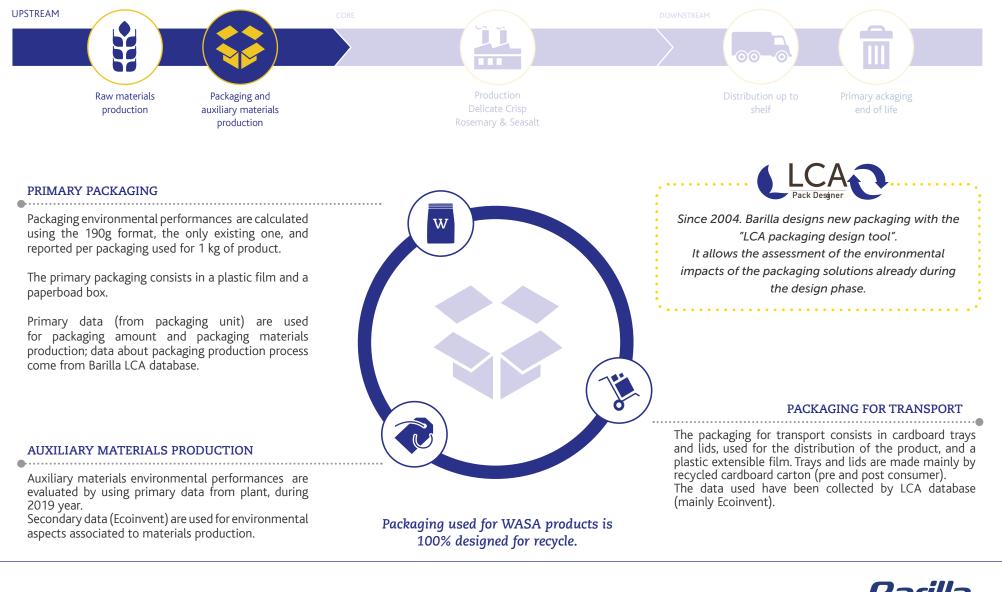

duction come from Agribalyse database.

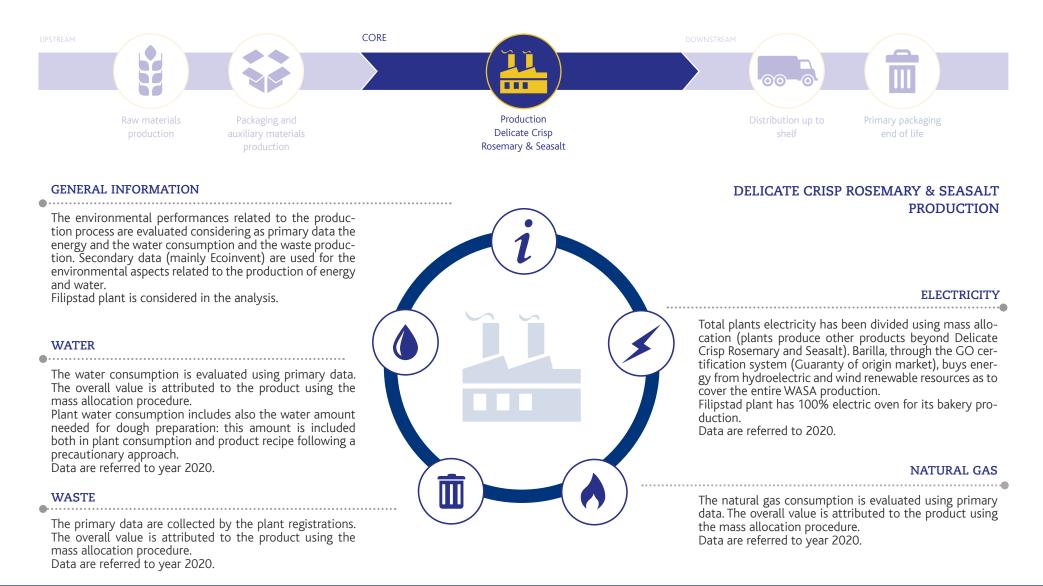

The Italian Food Company Since 187

5. Packaging and auxiliary materials production

6. Delicate Crisp Rosemary & Seasalt production

7. Distribution

DISTRIBUTION

Delicate Crisp Rosemary & Seasalt is produced in Filipstad (Sweden) plant and mostly distributed in Germany (46%), Netherlands (29%), Belgium (9%) and Austria (6%). Distribution performance were calculated considering the transport for about 1124 km by truck, 904 by ship and 348 by train.

All transport stage from plant to retailer are included.

The product does not need any particular storage condition (such as refrigeration).

The impacts related to the disposal of the packaging for transport have been calculated considering the average scenario for paper board and plastic packaging, considering all the countries involved in Delicate Crisp Rosemary & Seasalt distribution (reference Eurostat 2018).

8. Packaging end of life

Primary packaging is recyclable in separated paper collection and separated plastic collection.

Delicate Crisp Rosemary & Seasalt distribution involves more than 5 countries, here the packaging end-of-life scenarios related to Germany, Netherlands, and Belgium are reported as example

Abiotic Depletion Potential - Fossil fuels - MJ. net calorific value		6.75E+00	7.80E+00	2.09E+00	3.19E+00	3.69E-03	1.98E+01
Water scarcity poter	ntial. m³ eq.	3.36E-01	1.35E-01	3.70E-01	1.11E-03	3.04E-04	8.43E-01
WASTE PRODUCTION*	UPST.	REAM	CORE		STREAM	TOTAL	
		production	auxiliary materials production	Production	Distribution up to shelf	end of life	
Hazaro	dous waste disposed (g)	3.31E-04	1.98E-03	0.00E+00	0.00E+00	0.00E+00	2.3E-03
Non-Haz	ardous waste disposed (g)	7.39E+00	8.28E+00	0.00E+00	0.00E+00	0.00E+00	1.6E+01
Radioa	active waste disposed (g)	2.86E-01	1.15E+00	9.33E-02	1.99E-01	2.55E-04	1.7E+00

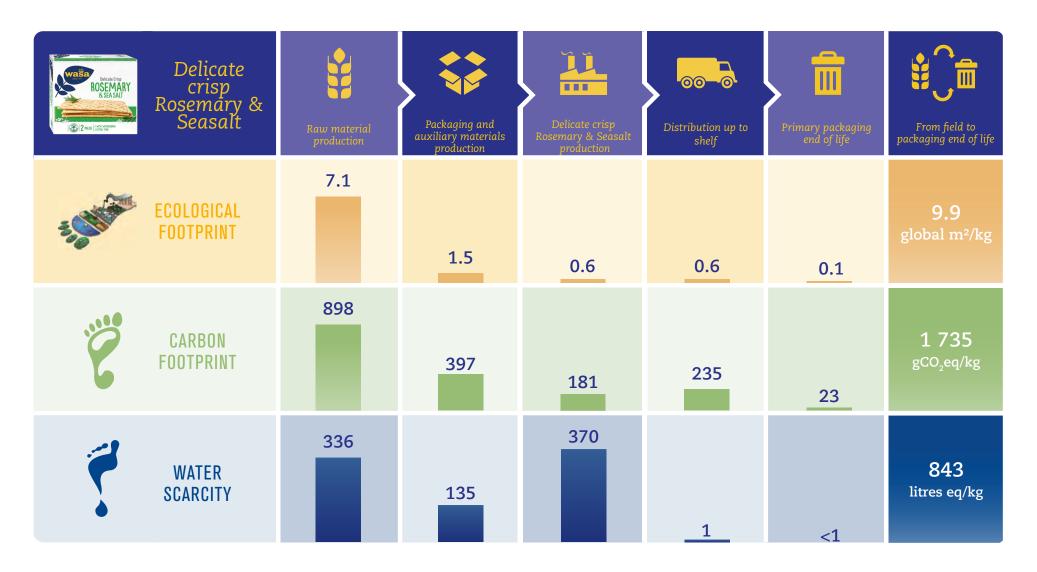

The biogenic contribution to Global Warming Potential refers only to biogenic methane. The contribution given by biogenic CO_2 is equal to zero, since the absorbed amount is equal to the emitted biogenic CO_2 within the reference 100 years period.

*Zero values indicate that – even if some waste are produced and disposed – their impact is evaluated within the system boundaries.

11. Glossary

ECOLOGICAL FOOTPRINT

The ecological footprint measures the area of biologically productive land and water required to provide the resources used and absorb the carbon dioxide waste generated along the entire life cycle. It is measured in standard units called global hectares (gha).

CARBON FOOTPRINT

A product carbon footprint is the total amount of greenhouse gases produced along the entire life cycle. It is expressed in equivalent mass of carbon dioxide (CO_2 -eq). In agriculture a significant contribution is given by the emission of nitrous oxide (N2O) due to the fertilizers use. It is also known as Global Warming Potential (GWP).

WATER SCARCITY

Water scarcity measures the available water remaining per unit of surface in a given watershed relative to the world average, after human and aquatic ecosystem demands have been met. This method builds on the assumption that the potential to deprive another user of water is directly proportional to the amount of water consumed and inversely proportional to the available water remaining per unit of surface and time in a region (watershed).

www.wulca-waterlca.org

www.globalfootprint.org

ACIDIFICATION (AP)

It is a phenomenon for which precipitation is unusually acidic, meaning that it has substandard levels of pH. It can have harmful effects on plants, aquatic animals and infrastructure. Acid rain is caused by emissions of SO_2 . NO_x and NH_3 . The acidification potential is measured in mass of sulphur dioxide equivalent (SO2-eq).

EUTROPHICATION (EP)

www.ipcc.ch

It is an abnormal proliferation of vegetation in the aquatic ecosystems caused by the addition of nutrients into rivers. lakes or ocean. which determinates a lack of oxygen. The eutrophication potential is mainly influenced by emission into water of phosphates and nitrates. It is expressed in mass of PO_4 requivalent.

PHOTOCHEMICAL OXIDANT FORMATION PO-TENTIAL (POFP)

Production of compounds that, under the light effect, are able to promote an oxidation reaction leading to ozone production in the troposphere.

The indicator is mainly influenced by VOCs (Volatile organic compounds) is usually expressed in mass of VOCs equivalent (g NMVOC - equivalent).
