**Functional unit:****General information on verification of EPD from EPD tools:**

Independent verification of data, other environmental information and the declaration according to ISO 14025:2010, § 8.1.3 and § 8.1.4. Individual third party verification of each EPD is not required when the EPD tool is i) integrated into the company's environmental management system, ii) the procedures for use of the EPD tool are approved by EPDNorway, and iii) the process is reviewed annually. See Appendix G of EPD-Norway's General Programme Instructions for further information on EPD tools.

**Verification of EPD tool:**

Independent third party verification of the EPD tool, background data and test-EPD in accordance with EPDNorway's procedures and guidelines for verification and approval of EPD tools.

## Product

### Product description:

This is a product specific EPD for Isola D-Projekt Xtra. Isola D-Projekt Xtra is a underlay for roof waterproofing for pitched roofs, new built and for rehabilitation.

### Product specification

The product is made of natural bitumen free of tar, combined with thermoplastic elastomer, natural filler and polypropylene fleece on the surfaces. Raw materials are mixed separately at a specific range of temperature and successively reinforced with polyester fleece, glass mat or a combination of these. The product has tacky edges to ensure a continuous water protecting layer, these edges are protected by siliconized PE, PP or PET films.

### Technical data:

Weight: 0,94 kg/m<sup>2</sup>  
Thickness: 0,9 mm

### Market:

## LCA: Calculation rules

### Declared unit:

1 m<sup>2</sup> Isola D-Projekt Xtra (YEP 800)

### Cut-off criteria:

All major raw materials and all the essential energy is included. The production processes for raw materials and energy flows with very small amounts (less than 1%) are not included. These cut-off criteria do not apply for hazardous materials and substances.

### Data quality:

Specific data for the product composition are provided by the manufacturer. They represent the production of the declared product and were collected for EPD development in the year of study. Background data is based on registered EPDs according to EN 15804, Ostfold Research databases, ecoinvent and other LCA databases. The data quality of the raw materials in A1 is presented in the table below.

### Allocation:

The allocation is made in accordance with the provisions of EN 15804. Incoming energy and water and waste production in-house is allocated equally among all products through mass allocation. Effects of primary production of recycled materials is allocated to the main product in which the material was used. The recycling process and transportation of the material is allocated to this analysis.

## LCA: Scenarios and additional technical information

The following information describe the scenarios in the different modules of the EPD.

The product is installed by nails to wooden substrate without use of any energy that are influencing A5 The packaging is waste treated. Module C1 is included but assumed to be zero, since the product is only a minor part of a total building demolition. The product is assumed to be incinerated with energy recovery in C3. The benefit of substituting energy (heat and electricity) is included in module D.

## Additional Norwegian requirements

### Greenhouse gas emissions from the use of electricity in the manufacturing phase

National production mix from import, low voltage (production of transmission lines, in addition to direct emissions and losses in grid) of applied electricity for the manufacturing process (A3).

Electricity mix	Data source	Amount	Unit
El-mix, Norway (kWh)	ecoinvent 3.4	31,04	g CO2-ekv/kWh

### Dangerous substances

No substances given by the REACH Candidate list or the Norwegian priority list are intentionally added to the product.

### Indoor environment

Not relevant, the product is intended for outdoor use.
