# ENVIRONMENTAL PRODUCT DECLARATION

*In accordance with EN 15804 and ISO 14025*

## Moisture Resistant H1 plasterboard 12.5 mm

Date of issue: 2019-06-03

Validity: 5 years

Valid until: 2024-05-20

Scope of the EPD®: United Arab Emirates

Oman / Qatar/ Saudi / Levant / Kuwait

The **environmental impacts** of this product have been assessed over its **whole life cycle**. Its Environmental Product Declaration has been verified by an **independent third party**.

**Registration number**

**The International EPD®**

**System:**

**S-P-01567**

## General information

**Manufacturer:** Saint-Gobain Gyproc

**Programme used:** International EPD System <http://www.environdec.com/>

**EPD registration number/declaration number:** S-P-01567

**PCR identification:** EN 15804 as the core PCR + The International EPD® System PCR 2012:01 version 2.2 for Construction Products and construction services with reference to the Saint Gobain Environmental Product Declaration Methodological Guide for Construction Products

**Site of manufacture:** Gyproc Abu Dhabi

**Product / product family name and manufacturer represented:** Moisture Resistant H1 plasterboard – Gyproc Abu Dhabi

**European Standard:** EN 520:2004+A1:2009 Gypsum Plasterboards, definitions, Requirements and test methods Type D, F,I,R

**American Standard:** ASTM C1396-14a Standard Specification for Gypsum Board  
Section 5: Gypsum wallboard

**Declaration issued:** 2019-06-03

**Valid until:** 2024-05-20

**Demonstration of verification:** an independent verification of the declaration was made, according to ISO 14025:2010. This verification was external and conducted by the following third party: Dr Andrew NORTON, Renuables based on the PCR mentioned above.

**EPD Prepared by:** Central Team, Saint Gobain Gypsum. Contact: [Yves.coquelet@saint-gobain.com](mailto:Yves.coquelet@saint-gobain.com)

**The declared unit is** 1 m2 of plasterboard with a weight of 10 kg /m<sup>2</sup> and a density of 800 kg/m<sup>3</sup>

**Declaration of Hazardous substances: (Candidate list of Substances of Very High Concern):** none

**Geographical scope:** The EPD covers United Arab Emirates/ Oman / Qatar/ Saudi / Levant / Kuwait

CEN standard EN 15804 serves as the core PCR <sup>a</sup>	
PCR:	PCR 2012:01 Construction products and Construction services, Version 2.2

## Product description

**Product description and use:** Gyproc Moisture Resistant H1 plasterboard consists of gypsum encased in paper liners.

Designed for use in the residential sector, Gyproc Moisture Resistant H1 plasterboard.

### Description of the main product components and or materials:

Plasterboard is made up of a gypsum core (calcium sulphate dihydrate) with additive and a paper liner.

### Technical data/physical characteristics:

REACTION TO FIRE	Euroclass A2-S1, d0 (EN520:2004)
THERMAL CONDUCTIVITY	0,19 W/ (m.K)

### Description of the main components and/or materials for 1 m<sup>2</sup> of product for the calculation of the EPD®:

PARAMETER	VALUE
Quantity of plaster for 1 m <sup>2</sup> of product	10 Kg
Thickness	12.5 mm
Density	800 kg/m <sup>3</sup>
Surfacing	Paper 320 g/m <sup>2</sup>
Packaging for the transportation and distribution	Polyethylene: 0.66 g/m <sup>2</sup> Gypsum culls : 0.294 kg/m <sup>2</sup>
Product used for the Installation	Paper tape, jointing compound, screws

During the life cycle of the product any hazardous substance listed in the “Candidate List of Substances of Very High Concern (SVHC) for authorization” has not been used in a percentage higher than 0,1% of the weight of the product.

The verifier and the program operator do not make any claim nor have any responsibility of the legality of the product.

## LCA calculation information

<b>EPD TYPE DECLARED</b>	Cradle to gate with options
<b>DECLARED UNIT</b>	1 m <sup>2</sup> of installed board.
<b>SYSTEM BOUNDARIES</b>	Cradle to gate with options: stages A1 – 3, A4, A5, B1 – 7, C1 – 4
<b>REFERENCE SERVICE LIFE (RSL)</b>	50 years by default, it corresponds to standard building design life
<b>CUT-OFF RULES</b>	Life Cycle Inventory data for a minimum of 99% of total inflows to the upstream and core module shall be included
<b>ALLOCATIONS</b>	Production data. Recycling, energy and waste data have been calculated on a mass basis.
<b>GEOGRAPHICAL COVERAGE AND TIME PERIOD</b>	Scope includes: Data included is collected from one production site, Gyproc Abu Dhabi. Data collected for the year 2018 Cradle to gate with options study. Background data: Ecoinvent (2015) and Gabi (2013 - 2016)
<b>PRODUCT CPC CODE</b>	37530 (Articles of plaster or of compositions based on plaster)

According to EN 15804, EPDs of construction products may not be comparable if they do not comply with this standard.  
According to ISO 21930, EPDs might not be comparable if they are from different programmes.

## Life cycle stages

### Flow diagram of the Life Cycle

### Product stage, A1-A3

Description of the stage: the product stage of plasterboard products is subdivided into 3 modules A1, A2 and A3 respectively “Raw material supply”, “transport to manufacturer” and “manufacturing”.

#### A1, raw material supply

This includes the extraction and processing of all raw materials and energy which occur upstream from the manufacturing process.

#### A2, transport to the manufacturer

The raw materials are transported to the manufacturing site. The modelling includes road, boat and/or train transportations of each raw material.

#### A3, manufacturing

This module includes the manufacture of products and the manufacture of packaging. The production of packaging material is taken into account at this stage. The processing of any waste arising from this stage is also included.

## Manufacturing process flow diagram

### Manufacturing in detail:

The initial materials are homogenously mixed to form a gypsum slurry that is spread via multiple hose outlets onto a paper liner on a moving conveyor belt. A second paper liner is fed onto the production line from above to form the plasterboard. The plasterboard continues along the production line where it is finished, dried, and cut to size.

Recycled Gypsum waste is reintegrated back into the manufacturing process wherever possible.

### Construction process stage, A4-A5

Description of the stage: the construction process is divided into 2 modules: A4, transport to the building site and A5, installation in the building

**A4, Transport to the building site:** this module includes transport from the production gate to the building site. Transport is calculated on the basis of a scenario with the parameters described in the following table.

PARAMETER	VALUE (expressed per functional/declared unit)
Fuel type and consumption of vehicle or vehicle type used for transport e.g. long distance truck, boat, etc.	0.38 liters per km
Distance	218 (km)
Capacity utilisation (including empty returns)	58.7 %
Bulk density of transported products	800 kg/m <sup>3</sup>
Volume capacity utilisation factor	1

**A5, installation into the building** The accompanying table quantifies the parameters for installing the product at the building site. All installation materials and their waste processing are included.

PARAMETER	VALUE (expressed per functional/declared unit)
<b>Ancillary materials for installation (specified by materials)</b>	Jointing compound 0.33kg/m <sup>2</sup> board, tape 1.23m /m <sup>2</sup> board, screws 8 /m <sup>2</sup> board
<b>Water use</b>	0.165 liters/m <sup>2</sup> board
<b>Other resource use</b>	none
<b>Quantitative description of energy type (regional mix) and consumption during the installation process</b>	None
<b>Wastage of materials on the building site before waste processing, generated by the product's installation (specified by type)</b>	Board: 0.58 kg Screws: 0 kg Jointing Compound: 0.017 kg Jointing Tape: 0.00021 kg
<b>Output materials (specified by type) as results of waste processing at the building site e.g. of collection for recycling, for energy recovering, disposal (specified by route)</b>	Board: 0.58 kg to landfill 95% to recycling 5% Screws: 0 kg Jointing Compound: 0.017 kg to landfill 95% to recycling 5% Jointing Tape: 0.00021 kg to landfill 95% to recycling 5%
<b>Direct emissions to ambient air, soil and water</b>	None

### Use stage (excluding potential savings), B1-B7

Description of the stage:

The use stage, related to the building fabric includes:

B1, use or application of the installed product;

B2, maintenance;

B3, repair;

B4, replacement;

B5, refurbishment,

B6, Operational energy use

B7, Operational water use

#### Description of scenarios and additional technical information:

The product has a reference service life of 50 years. This assumes that the product will last in situ with no requirements for maintenance, repair, replacement or refurbishment throughout this period. Therefore, it has no impact at this stage.

#### Maintenance:

PARAMETER	VALUE (expressed per functional/declared unit)
<b>Maintenance process</b>	None required during plasterboard lifetime
<b>Maintenance cycle</b>	None required during plasterboard lifetime
<b>Ancillary materials for maintenance (e.g. cleaning agent, specify materials)</b>	None required during plasterboard lifetime
<b>Wastage material during maintenance (specify materials)</b>	None required during plasterboard lifetime
<b>Net fresh water consumption during maintenance</b>	None required during plasterboard lifetime
<b>Energy input during maintenance (e.g. vacuum cleaning), energy carrier type, (e.g. electricity) and amount, if applicable and relevant</b>	None required during plasterboard lifetime

**Repair:**

PARAMETER	VALUE (expressed per functional/declared unit)
<b>Repair process</b>	None required during plasterboard lifetime
<b>Inspection process</b>	None required during plasterboard lifetime
<b>Repair cycle</b>	None required during plasterboard lifetime
<b>Ancillary materials (e.g. lubricant, specify materials)</b>	None required during plasterboard lifetime
<b>Wastage material during repair (specify materials)</b>	None required during plasterboard lifetime
<b>Net fresh water consumption during repair</b>	None required during plasterboard lifetime
<b>Energy input during repair (e.g. crane activity), energy carrier type, (e.g. electricity) and amount if applicable and relevant</b>	None required during plasterboard lifetime

**Replacement:**

PARAMETER	VALUE (expressed per functional/declared unit)
<b>Replacement cycle</b>	None required during plasterboard lifetime
<b>Energy input during replacement (e.g. crane activity), energy carrier type, (e.g. electricity) and amount if applicable and relevant</b>	None required during plasterboard lifetime
<b>Exchange of worn parts during the product's life cycle (e.g. zinc galvanized steel sheet), specify materials</b>	None required during plasterboard lifetime

**Refurbishment:**

PARAMETER	VALUE (expressed per functional/declared unit)
<b>Refurbishment process</b>	None required during plasterboard lifetime
<b>Refurbishment cycle</b>	None required during plasterboard lifetime
<b>Material input for refurbishment (e.g. bricks), including ancillary materials for the refurbishment process (e.g. lubricant, specify materials)</b>	None required during plasterboard lifetime
<b>Wastage material during refurbishment (specify materials)</b>	None required during plasterboard lifetime
<b>Energy input during refurbishment (e.g. crane activity), energy carrier type, (e.g. electricity) and amount</b>	None required during plasterboard lifetime
<b>Further assumptions for scenario development (e.g. frequency and time period of use, number of occupants)</b>	None required during plasterboard lifetime

## Use of energy and water:

PARAMETER	VALUE (expressed per functional/declared unit)
Ancillary materials specified by material	None required during plasterboard lifetime
Net fresh water consumption	None required during plasterboard lifetime
Type of energy carrier (e.g. electricity, natural gas, district heating)	None required during plasterboard lifetime
Power output of equipment	None required during plasterboard lifetime
Characteristic performance (e.g. energy efficiency, emissions, variation of performance with capacity utilisation etc.)	None required during plasterboard lifetime
Further assumptions for scenario development (e.g. frequency and time period of use, number of occupants)	None required during plasterboard lifetime

## End-of-life stage C1-C4

Description of the stage: The end-of-life stage includes:

C1, de-construction, demolition;

C2, transport to waste processing;

C3, waste processing for reuse, recovery and/or recycling: the entire product is assumed here to be sent to landfill  
C4, disposal, including provision and all transport, provision of all materials, products and related energy and water use.

## End-of-life:

PARAMETER	VALUE (expressed per functional/declared unit) / DESCRIPTION
Collection process specified by type	12.1 kg collected with mixed construction waste
Recovery system specified by type	0.60 kg for recycling
Disposal specified by type	11.5 kg to municipal landfill
Assumptions for scenario development (e.g. transportation)	On average, Gypsum waste is transported 25 km by road from construction / demolition sites to end of life treatment or disposal.

## Reuse/recovery/recycling potential, D

Description of the stage:

Module D has not been taken into account

## LCA results

Description of the system boundary (X = Included in LCA, MNA = Module Not Assessed)

CML 2001 has been used as the impact model. Specific data has been supplied by the plant, and generic data come from the GABI and Ecoinvent databases.

All emissions to air, water, and soil, and all materials and energy used have been included.

All figures refer to a declared unit of 1m<sup>2</sup> of plasterboard with a weight of 10 kg/m<sup>2</sup>

## LCA results interpretation

The following figure refers to a declared unit of 1m<sup>2</sup> of plasterboard with a weight of 10 kg/m<sup>2</sup>

[1] This indicator corresponds to the abiotic depletion potential of fossil resources.

[2] This indicator corresponds to the total use of primary energy.

[3] This indicator corresponds to the use of net fresh water.

[4] This indicator corresponds to the sum of hazardous, non-hazardous and radioactive waste disposed.

### Global Warming Potential (Climate Change) (GWP)

When analyzing the above figure for GWP, it can clearly be seen that the majority of contribution to this environmental impact is from the production modules (A1 – A3). This is primarily because the sources of greenhouse gas emissions are predominant in this part of the life cycle. CO<sub>2</sub> is generated upstream from the production of electricity and is also released on site by the combustion of natural gas. We can see that other sections of the life cycle also contribute to the GWP; however, the production modules contribute to over 80% of the contribution. Combustion of fuel in transport vehicles will generate the second highest percentage of greenhouse gas emissions.

### Non-renewable resources consumptions

We can see that the consumption of non – renewable resources is once more found to have the highest value in the production modules. This is because a large quantity of natural gas is consumed within the factory, and non – renewable fuels such as natural gas and coal are used to generate the large amount of electricity we use. The contribution to this impact from the other modules is very small and primarily due to the non – renewable resources consumed during transportation.

## Energy Consumptions

As we can see, modules A1 – A3 have the highest contribution to total energy consumption. Energy in the form of electricity and natural gas is consumed in a vast quantity during the manufacture of glass wool so we would expect the production modules to contribute the most to this impact category.

## Water Consumption

We can see that water consumption is mainly during the production phase. For the production phase, water is used within the manufacturing facility and therefore we see the highest contribution here. However, we recycle a lot of the water on site so the contribution is still relatively low.

## Waste Production

Waste production does not follow the same trend as the above environmental impacts. The largest contributor is the end of life module. This is because the entire product is sent to landfill and recycling treatment once it reaches the end of life state. However, there is a still an impact associated with the production module since we do generate waste on site. The very small impact associated with installation is due to the loss rate of product during implementation.

## Additional information
