General information

Manufacturer:

SAINT-GOBAIN GLASS FRANCE¹
18 avenue d'Alsace
92400 Courbevoie
FRANCE

European standard EN 15804 served as core EPD		
Product / product family name and manufacturer represented	SGG SATINOVO® MATE produced by SAINT-GOBAIN GLASS INDUSTRY	
Declaration issued:	15-09-2016	
valid until:	15-09-2021	
Program used	INTERNATIONAL www.environdec.com	EPD SYSTEM
EPD registration number/declaration number:	S-P 00931	
PCR identification	EN 15804 as the core PCR and PCR for construction products and construction services issue by the International EPD System (PCR 2012:01 Construction products and construction services, version 2.01 / 2016-03-09)	
PCR review was conducted by	The technical committee of the international EPD system Chair: Massimo Marino Contact via info@environdec.com	
CPC Classification:	37113 "Float glass and surface ground or polished glass, in sheets."	
Independent verification of the declaration and data, according to ISO 14025	An independent verification of the declaration and data was made, according to ISO 14025:2010. This verification was based on the PCR mentioned above. EPD process certification (internal)	
Third party verifier	Bureau Veritas Certification Sverige AB for the EPD process certification	
Accredited or approved by	INTERNATIONAL EPD SYSTEM Swedac Ackreditering	

¹ The manufacturing companies concerned are SAINT-GOBAIN GLASS FRANCE, SAINT-GOBAIN GLASS DEUTSCHLAND, SAINT-GOBAIN GLASS UK, SAINT-GOBAIN GLASS ITALY, SAINT-GOBAIN CRISTALLERIA, SAINT-GOBAIN GLASS POLSKA, and all glassolutions sites within the EU.

Product description

Product description and description of use

SGG SATINOVO MATE is obtained by treating one of the surfaces of a glass product with acid etching. It is meant to be used in building, furniture & industrial applications. Depending on the glass substrate, SGG SATINOVO MATE is called:

- Clear, on SGG PLANICLEAR (basic soda-lime silicate glass produced using the float procedure)
- Extra-clear, on SGG DIAMANT (low iron soda-lime silicate glass produced using the float procedure)
- Tinted, on SGG PARSON (body-tinted soda-lime silicate glass, produced using the float procedure)

This acid etching treatment modifies the appearance of the glass, providing a translucent appearance.

Glass substrates are in conformity with the European Standard EN 572-2.

SGG SATINOVO MATE meets the durability requirements of class C of European standards EN 1096-1 and -2.

Performance data

Thickness in mm	4	6	10
LT	89.1%	88%	86%
LRe	8.1%	8%	8%
g-Value*	0.85	0.84	0.80
Shading Coefficient	0.98	0.97	0.92
U-Value in W/m ² K	5.8	5.7	5.6

Light and solar performance according to EN 410

Declaration of the main product components and/or materials

The product is 100% glass CAS number 65997-17-3, EINECS number 266-046-0.

At the date of issue of this declaration, there is no "Substance of Very High Concern" (SVHC) in concentration above 0.1% by weight, and neither do their packaging, following the European REACH regulation (Registration, Evaluation, Authorization and Restriction of Chemicals).

LCA calculation information

FUNCTIONAL UNIT / DECLARED UNIT	1m ² of SGG SATINOVO MATE to be incorporated into a building or furniture. The impacts of installation are not taken into account.
SYSTEM BOUNDARIES	Cradle to gate: Mandatory Stages = A1-A3
REFERENCE SERVICE LIFE (RSL)	n/a. Boundaries are cradle to gate
CUT-OFF RULES	All significant parameters shall be included. According to EN 15804, mass flows under 1% of the total mass input; and/or energy flows representing less than 1% of the total primary energy usage of the associated unit process may be omitted. However, the total amount of energy and mass omitted must not exceed 5% per module. Substances of Very High Concern (SVHC), as defined in the REACH Regulation (article 57), in a concentration above 0.1% by weight, in glass final products, shall be included in the Life Cycle Inventory and the cut-off rules shall not apply.
ALLOCATIONS	Allocations are done on mass basis (kg)
GEOGRAPHICAL COVERAGE AND TIME PERIOD	The informations were established over the year 2014. The information collected comes from the European sites producing SGG SATINOVO MATE (SAINT-GOBAIN GLASS INDUSTRY)
BACKGROUND DATA SOURCE	GaBi data were used to evaluate the environmental impacts. The data are representative of the years 2012-2015.
SOFTWARE	Gabi Envision SGG_EPD tool for Planiclear 1m2_2016-06-27.gbmx

According to EN 15804, EPD of construction products may not be comparable if they do not comply with this standard. According to ISO 21930, EPD might not be comparable if they are from different programmes.

Life cycle stages

Diagram of the Life Cycle

Not relevant stages: as this is a cradle to gate with options declaration stages A4, A5 and B1-B7 are not relevant.

Product stage, A1-A3

Description of the stage: For etched glass A1 to A3 represents the production of glass in the float, as well as the etching process, from cradle to gate.

The product stage includes the extraction and processing of raw materials and energies, transport to the manufacturer, manufacturing and processing of flat glass.

Manufacturing process flow diagram

©Saint-Gobain/Julien Kern pour SPECIFIQUE

Float process

1. **BATCH MIXER:** Mix of raw materials (silica, soda ash, lime, feldspar and dolomite) to which is added recycled glass (cullet) and other compounds depending on the desired color and properties.
2. **FUSION FURNACE:** Raw materials are melted at 1,550°C in a furnace.
3. **FLOAT:** The molten glass is fed into a bath of molten tin. The glass floats on this flat surface and is drawn off in a ribbon. Serrated wheels, or top rolls, pull and push the glass sideways depending on the desired thickness (from 2 to 19 millimeters).
4. **ANNEALING LEHR:** The glass is lifted onto conveyor rollers and passes through a controlled cooling tunnel measuring more than 100 meters in length. Approximately 600°C at the start of this step, the glass exits the lehr at room temperature.
5. **CUTTING AND STACKING:** The glass is automatically cut lengthwise and crosswise. The sheets of glass are raised by vacuum frames that then place them on glass stillages.
6. **QUALITY:** Automatic inspections and regular samples are taken to check the quality of the glass at each step in the glassmaking process.
7. **STORAGE AND TRANSPORTATION:** The stillages are placed on storage racks in the warehouse.
8. **ENVIRONMENT:** Use of recycled cullet, installation of pollution abatement systems and closed circuit management of water: every measure is taken to limit the consumption of energy, extraction of natural resources, production of waste and emissions into the atmosphere.

Acid-etching process

9. **ACID-ETCHING GLASS:** hydrofluoric acid particles bombard one side of the glass giving it a homogeneous and translucent appearance. The intensity of the acid etch will vary depending on the concentration of the acid and the duration of the treatment.

LCA results

The table below present the environmental impacts associated with the production of 1 square meter of SGG SATINOVO MATE. This is a Cradle-to-Gate EPD. The environmental impacts of all the other stages in the life cycle of the SGG SATINOVO MATE are not declared (MND).

ENVIRONMENTAL IMPACTS 3 mm

Parameters	Product stage	Construction process stage		Use stage							End-of-life stage				D Reuse, recovery, recycling

 Global Warming Potential (GWP) - kg CO ₂ equiv/FU	21.2	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
The global warming potential of a gas refers to the total contribution to global warming resulting from the emission of one unit of that gas relative to one unit of the reference gas. carbon dioxide. which is assigned a value of 1.															
 Ozone Depletion (ODP) kg CFC 11 equiv/FU	5.05E-10	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
Destruction of the stratospheric ozone layer which shields the earth from ultraviolet radiation harmful to life. This destruction of ozone is caused by the breakdown of certain chlorine and/or bromine containing compounds (chlorofluorocarbons or halons). Which break down when they reach the stratosphere and then catalytically destroy ozone molecules.															
 Acidification potential (AP) kg SO ₂ equiv/FU	0.0975	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
Acid depositions have negative impacts on natural ecosystems and the man-made environment incl. buildings. The main sources for emissions of acidifying substances are agriculture and fossil fuel combustion used for electricity production, heating and transport.															
 Eutrophication potential (EP) kg (PO ₄) ³⁻ equiv/FU	0.0316	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
Excessive enrichment of waters and continental surfaces with nutrients. and the associated adverse biological effects.															
 Photochemical ozone creation (POPC) kg Ethene equiv/FU	0.00638	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
Chemical reactions brought about by the light energy of the sun. The reaction of nitrogen oxides with hydrocarbons in the presence of sunlight to form ozone is an example of a photochemical reaction.															
 Abiotic depletion potential for non-fossil resources (ADP-elements) - kg Sb equiv/FU	0.00014	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
 Abiotic depletion potential for fossil resources (ADP-fossil fuels) - MJ/FU	247	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
Consumption of non-renewable resources. thereby lowering their availability for future generations.

ENVIRONMENTAL IMPACTS 4 mm

Parameters	Product stage	Construction process stage		Use stage							End-of-life stage				D Reuse, recovery, recycling
	A1 / A2 / A3	A4 Transport	A5 Installation	B1 Use	B2 Maintenance	B3 Repair	B4 Replacement	B5 Refurbishment	B6 Operational energy use	B7 Operational water use	C1 Deconstruction / demolition	C2 Transport	C3 Waste processing	C4 Disposal	
 Global Warming Potential (GWP) - kg CO ₂ equiv/FU	16.5	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
The global warming potential of a gas refers to the total contribution to global warming resulting from the emission of one unit of that gas relative to one unit of the reference gas. carbon dioxide. which is assigned a value of 1.															
 Ozone Depletion (ODP) kg CFC 11 equiv/FU	4.46E-10	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
Destruction of the stratospheric ozone layer which shields the earth from ultraviolet radiation harmful to life. This destruction of ozone is caused by the breakdown of certain chlorine and/or bromine containing compounds (chlorofluorocarbons or halons). Which break down when they reach the stratosphere and then catalytically destroy ozone molecules.															
 Acidification potential (AP) kg SO ₂ equiv/FU	0.0721	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
Acid depositions have negative impacts on natural ecosystems and the man-made environment incl. buildings. The main sources for emissions of acidifying substances are agriculture and fossil fuel combustion used for electricity production. heating and transport.															
 Eutrophication potential (EP) kg (PO ₄) ³⁻ equiv/FU	0.0205	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
Excessive enrichment of waters and continental surfaces with nutrients. and the associated adverse biological effects.															
 Photochemical ozone creation (POPC) kg Ethene equiv/FU	0.00433	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
Chemical reactions brought about by the light energy of the sun. The reaction of nitrogen oxides with hydrocarbons in the presence of sunlight to form ozone is an example of a photochemical reaction.															
 Abiotic depletion potential for non-fossil ressources (ADP-elements) - kg Sb equiv/FU	0.00010	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
 Abiotic depletion potential for fossil ressources (ADP-fossil fuels) - MJ/FU	190	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
Consumption of non-renewable resources. thereby lowering their availability for future generations.

 Global Warming Potential (GWP) - kg CO ₂ equiv/FU	11.1	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
The global warming potential of a gas refers to the total contribution to global warming resulting from the emission of one unit of that gas relative to one unit of the reference gas. carbon dioxide. which is assigned a value of 1.															
 Ozone Depletion (ODP) kg CFC 11 equiv/FU	5.53E-9	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
Destruction of the stratospheric ozone layer which shields the earth from ultraviolet radiation harmful to life. This destruction of ozone is caused by the breakdown of certain chlorine and/or bromine containing compounds (chlorofluorocarbons or halons). Which break down when they reach the stratosphere and then catalytically destroy ozone molecules.															
 Acidification potential (AP) kg SO ₂ equiv/FU	0.0465	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
Acid depositions have negative impacts on natural ecosystems and the man-made environment incl. buildings. The main sources for emissions of acidifying substances are agriculture and fossil fuel combustion used for electricity production. heating and transport.															
 Eutrophication potential (EP) kg (PO ₄) ³⁻ equiv/FU	0.0092	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
Excessive enrichment of waters and continental surfaces with nutrients. and the associated adverse biological effects.															
 Photochemical ozone creation (POPC) kg Ethene equiv/FU	0.00313	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
Chemical reactions brought about by the light energy of the sun. The reaction of nitrogen oxides with hydrocarbons in the presence of sunlight to form ozone is an example of a photochemical reaction.															
 Abiotic depletion potential for non-fossil resources (ADP-elements) - kg Sb equiv/FU	4.31E-5	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
 Abiotic depletion potential for fossil resources (ADP-fossil fuels) - MJ/FU	139	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
Consumption of non-renewable resources. thereby lowering their availability for future generations.

	A1 / A2 / A3	A4 Transport	A5 Installation	B1 Use	B2 Maintenance	B3 Repair	B4 Replacement	B5 Refurbishment	B6 Operational energy use	B7 Operational water use	C1 Deconstruction / demolition	C2 Transport	C3 Waste processing	C4 Disposal	
 Global Warming Potential (GWP) - kg CO ₂ equiv/FU	18.8	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
The global warming potential of a gas refers to the total contribution to global warming resulting from the emission of one unit of that gas relative to one unit of the reference gas. carbon dioxide. which is assigned a value of 1.															
 Ozone Depletion (ODP) kg CFC 11 equiv/FU	1.09E-8	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
Destruction of the stratospheric ozone layer which shields the earth from ultraviolet radiation harmful to life. This destruction of ozone is caused by the breakdown of certain chlorine and/or bromine containing compounds (chlorofluorocarbons or halons). Which break down when they reach the stratosphere and then catalytically destroy ozone molecules.															
 Acidification potential (AP) kg SO ₂ equiv/FU	0.0848	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
Acid depositions have negative impacts on natural ecosystems and the man-made environment incl. buildings. The main sources for emissions of acidifying substances are agriculture and fossil fuel combustion used for electricity production, heating and transport.															
 Eutrophication potential (EP) kg (PO ₄) ³⁻ equiv/FU	0.0141	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
Excessive enrichment of waters and continental surfaces with nutrients. and the associated adverse biological effects.															
 Photochemical ozone creation (POPC) kg Ethene equiv/FU	0.0057	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
Chemical reactions brought about by the light energy of the sun. The reaction of nitrogen oxides with hydrocarbons in the presence of sunlight to form ozone is an example of a photochemical reaction.															
 Abiotic depletion potential for non-fossil resources (ADP-elements) - kg Sb equiv/FU	7.37E-5	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
 Abiotic depletion potential for fossil resources (ADP-fossil fuels) - MJ/FU	242	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND
Consumption of non-renewable resources. thereby lowering their availability for future generations.															

RESOURCE USE 6 mm

LCA results interpretation

In the production of SGG SATINOVO MATE, the impacts due to glass production account as average for more than 80% of total impacts.

For the production of glass, the main impacts are related to the energy consumed in the furnace and on the impacts generated in the production of one of the main raw materials, the soda ash.

		Environmental impacts (A1-A3) SGG SATINOVO MATE 4mm	Unit
	Global warming	15.3	Kg CO ₂ equiv/FU
	Non-Renewable resources consumption ^[1]	176	MJ/FU
	Energy consumption ^[2]	205.4	MJ/FU
	Water consumption ^[3]	0.0671	M ³ /FU
	Waste production ^[4]	1.164	Kg/FU

^[1]: This indicator corresponds to the abiotic depletion potential of fossil resources.

^[2]: This indicator corresponds to the total use of primary energy.

^[3]: This indicator corresponds to the use of fresh net water.

^[4]: This indicator corresponds to the sum of hazardous, non-hazardous and radioactive waste disposed.

Health characteristics

Concerning the Indoor air quality, clear flat glass is an inert material that doesn't release any inorganic & organic compounds, in particular no VOC (volatile organic compounds).

Additional Environmental Information

Saint-Gobain's environmental policy

Saint-Gobain's environmental vision is to ensure the sustainable development of its Activities, while preserving the environment from the impacts of its processes and services throughout their life cycle. The Group thus seeks to ensure the preservation of resources, meet the expectations of its relevant stakeholders, and offer its customers the highest added value with the lowest environmental impact.

The Group has set two long-term objectives: zero environmental accidents and a minimum impact of its activities on the environment. Short and medium-term goals are set to address these two ambitions. They concern five environmental areas identified by the Group: raw materials and waste; energy, atmospheric emissions and climate; water; biodiversity; and environmental accidents and nuisance.

Saint-Gobain's long term objectives:

Non recovered waste (2010-2025) : -50%

Long-term: zero non-recovered waste

Energy consumption: -15% (2010-2025)

CO₂ emissions: -20% (2010-2025)

Emissions of NOx, SO₂ and dust: -20% for each emissions category (2010-2025)

Water discharge: -80% (2010-2025)

Long-term: zero industrial water discharge in liquid form

2025: promote the preservation of natural areas at Company sites as much as possible

2025: all environmental events are recorded, registered and investigated

More information on our website: www.saint-gobain.com and our Registration Document.

Our products' contribution to Sustainable Buildings

Saint-Gobain encourages sustainable construction and develops innovative solutions for new and renovated buildings that are energy efficient, comfortable, healthy and esthetically superior, while at the same time protecting natural resources.

The following information might be of help for green building certification programs:

RECYCLED CONTENT

(Required for LEED v4 Building product disclosure and optimization - sourcing of raw materials)

Recycled content: proportion. by mass. of recycled material in a product or packaging. Only pre-consumer and post-consumer materials shall be considered as recycled content.

- Post-consumer material: material generated by households or commercial. industrial and institutional facilities in their role as end-users of the product which can no longer be used for its intended purpose.

In practice. in the case of flat glass. all material coming from glass recycling collection schemes falls under this category. i.e. glass waste from end-of-life vehicles. construction and demolition waste. etc.

- Pre-consumer material: material diverted from the waste stream during a manufacturing process. Excluded is reutilization of materials such as rework. regrind. or scrap generated in a process and capable of being reclaimed within the same process that generated it.

In the case of flat glass. this waste originates from the processing or re-processing of glass that takes place before the final product reaches the consumer market. Pre-consumer waste flat glass is made of cut-offs. losses during laminating. bending and other processing. including the manufacture of insulating glass units or automotive windscreens.

Cullet generated in the furnace plant and which is reintroduced into the furnace cannot be considered as pre-consumer recycled content. since there was never an intent to discard it and therefore it would never have entered the solid waste stream.

Pre-consumer cullet	~7%
Post-consumer cullet	< 1%

In the future. Saint-Gobain Glass intends to continue the increase of recycled material in its products. especially when recycling building post-consumer cullet glass dismantling and recycling networks will be available in every country.

RESPONSIBLE Sourcing

(Required for BREEAM International new construction 2013 – MAT 03 Responsible sourcing)

All Saint-Gobain Glass Industry sites with a glassmaking furnace. are ISO 14001 certified.

The Saint-Gobain Glass Industry site from the UK (Eggborough) has a BES 6001 certification. with a Very Good score.

All internal Saint-Gobain Glass quarries are certified ISO 14001 like. for example. SAINT-GOBAIN SAMIN (sand) in France. Many Saint-Gobain Glass raw material suppliers are certified ISO 14001. Our policy consists in encouraging the sourcing of raw materials extracted or made in sites certified ISO 14001 (or the equivalent).

For any other question / document / certification. please contact our local sales teams.
