Valagro world

Valagro was born in Abruzzo and today brings the same passion for nature to the world from which its solutions for the care and nourishment of plants are born. Today our company can globally respond to the specific needs of the customer, needs that reflect new and growing needs, in a context of increasingly scarce and precious resources. This is why in Valagro we have decided to take on a challenge, to be able to bring development and well-being by using fewer resources, or rather produce more and better for world needs, using less land, less water, fewer technical means. To do this, we have placed research and innovation at the service of Nature, aware that taking care of the future means working together in respect of the environment and protecting everyone's health.

Today Valagro is a leading company in the production and marketing of Biostimulants and nutritional specialties, with 13 branches located all over the world. In addition to the Atessa production site and another plant in Italy, Valagro also has 2 plants in Norway, another 2 in India and a new plant in Pirassununga, Brazil.

A story of value

The history of Valagro began in the 80s with a distinctive value: the constant search for innovation, with respect for nature and ethics. These are the peculiarities that allowed the company to establish itself successfully in the Italian market during the eighties, successfully embarking on a path of consolidation of its presence in a growing number of countries around the world. During the 1990s, expertise, customer orientation and innovation allowed Valagro to open to the European market and to assert its presence in East and South America and subsequently in the United States.

International success

The new millennium opens with a process of industrial diversification made possible by important acquisitions which initially concern the bio-nutrients of the American Nutrecology, specialized in special fertilizers, and the algae extracts supplied by the Norwegians Algea and Nordtang. Subsequently, Valagro acquired the English Maxicrop, with its subsidiaries in Australia and New Zealand, and the French Samabiol.

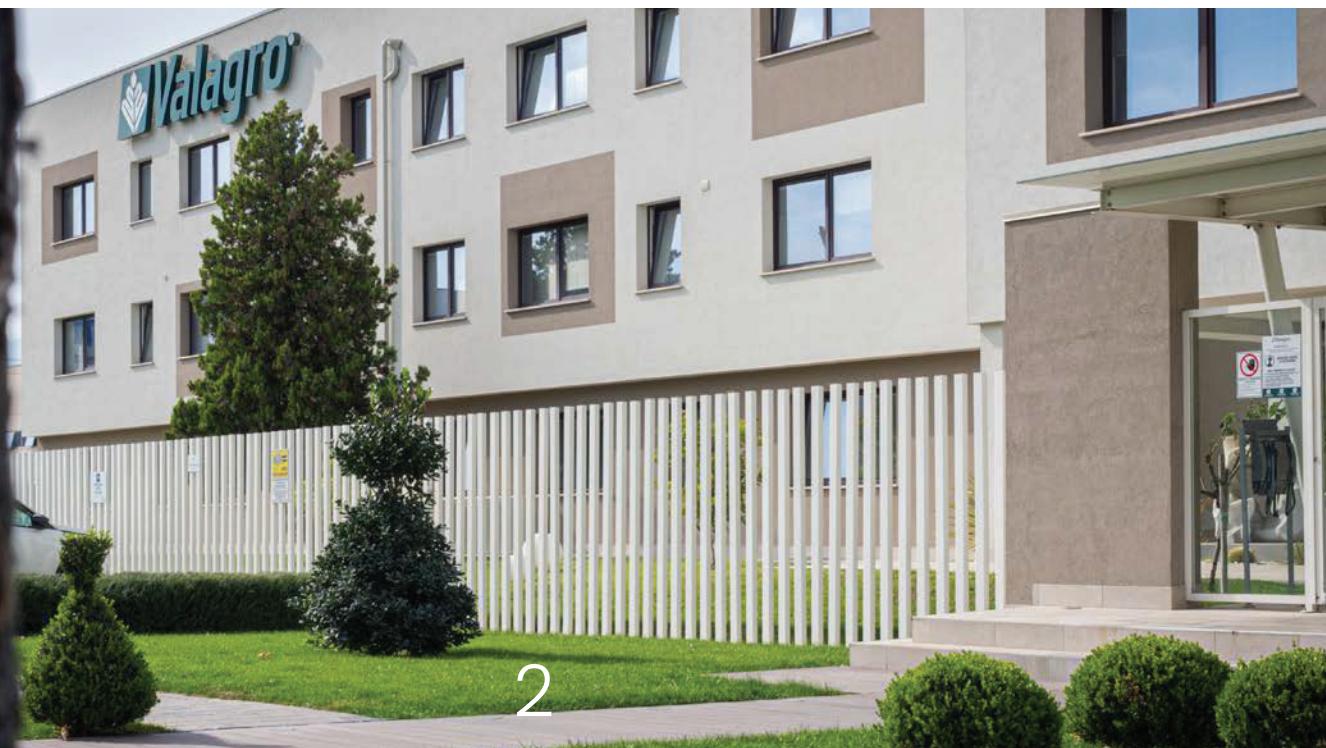

Subsequently, in 2015, with the acquisition of the Indian biotechnology company Sri Biotech Laboratories India Limited (now Valagro BioSciences), Valagro enters the new market segment of biocontrol and new technologies, such as fermentation, strengthening its presence in the subcontinent Asia and affirming its status as a global company in the field of biologicals.

These are the phases that accompany the consolidation of a widespread distribution network that reaches over 80 countries, where Valagro is present today with a top-level offer certified by the highest international authorities.

In October 2020, Syngenta acquired Valagro, an investment made since a shared scientific innovation base. Since the acquisition, both companies have worked closely together to serve farmers around the world, sharing their respective knowledge and leveraging their crucial capabilities to build a business dedicated to the world's leading biologicals.

In July 2023, Syngenta and Valagro announced the birth of the new brand.

At the heart of it all are our people who work to enable farmers to increase the productivity of their crops, while creating a sustainable future for people and the environment.

Company Information

Commitment to sustainability

Quality at Valagro is a daily commitment that involves every resource and influences every process. Valagro has followed a precise certification program over the years, adopting a global improvement system aimed at achieving the safety and well-being of workers, the quality of products and processes, and respect for the environment.

Valagro SpA production site in Italy

The Valagro plant consists of the following production plants: Solids packaging plant; Granular plant; Water-soluble plant, Chelated plant, Liquid plant and Microgranular plant.

In recent years, production policy has preferred particular formulations, oriented towards nutritional needs

Specific: Chelated micronutrients, for the prevention and treatment of chlorosis; Biostimulants, obtained from organic matrices of plant origin to optimize metabolic processes of plants; Foliar supplements, for different nutritional needs and phenological phases; fertilizers, mineral and organo-mineral, made with the purest raw materials with high concentration and granular fertilizers, for a correct supply of the most requested nutrients (NPK) in relation to the different seasonal times.

Valagro Manufacturing site in Brazil

The Valagro Manufacturing site in Brazil opens on May 31, 2017, located in Estrada Municipal Fernando Luiz Ladgraf (PNG-060), 700 Bairro Cantareira Pirassununga.

Equipped with two production lines for the production and packaging of Biostimulants and water-soluble fertilizers, the new plant covers an area of 30,000 m², can count on a maximum production capacity of 50,000 tons/year and a high storage capacity. Overall, in line with the search for ever greater sustainability, a founding value for Valagro, the Pirassununga plant was built following rigorous criteria that guarantee efficiency and eco-sustainability of the structure (reduction of energy consumption, reuse of rainwater, recycling management, control, and waste disposal).

Thanks to these characteristics, the Pirassununga plant, built with an investment of 10 million euros, today represents a strategic production and logistics base for the distribution of Valagro solutions not only in Brazil, but more widely in the South American market.

Valagro Biosciences Pvt Ltd in India

In September 2018, the name of the Indian subsidiary got converted from Sri Biotech Laboratories India Limited to Valagro Biosciences Limited and later, in July 2019, it was renamed as Valagro Biosciences Private Limited.

The production site is located in Sy.No. 1,2,3,16,17&18, Phase II, Pashamylaram(v), Patancheru(M), Medak Dist , T.S.

With its innovative GEA Power research and technology platform developed both in Italy and India (specifically for microbials), Valagro plans to expand globally its range of innovative and sustainable solutions, with "Passion for nature, belief in innovation, commitment to the future".

In February 2019, Valagro launched its new line of microbial-based solutions in Valagro's event for Future Farming, India entitled "The key role of Biologicals for Indian Agriculture", held at New Delhi in conjunction with the BioAg World Congress (18th - 20th February 2019) that gave important opportunity to showcase - together with leading experts and opinion leaders in the sector - Valagro 's development prospects in the field of biologicals, prospects that are being actively pursued by the Group's Indian subsidiary, Valagro Biosciences, following its successful completion of compliance process with the Biological Diversity Act (2002) under the National Biodiversity Authority (NBA), to produce sustainable solutions for the Indian agricultural market.

In October 2020 Valagro entered the Syngenta group, a choice that arises from a mentality focused on attention to sustainability and scientific innovation shared by the two companies.

After the acquisition, Valagro e Syngenta have worked closely together in the service of farmers around the world, sharing knowledge and leveraging the respective know-how to position itself as a world leading company in the biologicals sector.

Infrastructure: Company has well developed manufacturing and research facility spread across 1.55 acres area with an annual production capacity of 50,000 MT of powder form, 50,000 KL in liquid form and 10,000 MT in granular form. It has well established Production facility that is divided into three areas, first area is to produce Plant Biostimulants that has main machineries like chemical reactors, spray driers, storage tanks, drum mixers etc.; second area is to produce Specialty Nutrients (WSFs), which is well equipped with equipment like Mixer blenders,

bucket elevator, on line processing & packing area, storage units etc., and third area is to produce Microbials that has equipments like 2 KL fermenters with SCADA online monitoring facilities, growth rooms with AHUs, formulation units, blenders, spray driers, downstream process instruments like online centrifuge, freeze drier etc. and associated infrastructure.

Products information

The products covered by the study are 12 Biostimulants, 1 water-soluble fertilizer and 1 micronutrient produced by VALAGRO in the year 2022. Some of the products may have the same formulation but be packaged differently and have a different trade name. Valagro's product range is very wide and includes more than 300 registered trade names; however, the products under study are composed of liquid and solid Biostimulants, micronutrients and fertilizers.

The products under study are part of the farm line, our innovative solutions are created to promote harvests of superior quantity and quality. Plants with firmer roots, which grow with greater vigor, capable of offering a stronger resistance even in hostile growth conditions; more productive plants, capable of giving fruit that ripens more quickly and is tastier on the palate.

These successes are attested by numerous agronomic tests and by a vast amount of data, collected in the four corners of the planet.

Successes obtained by using natural active substances, in full respect of the environment and to protect human health.

The main product lines in the Italian production site are Biostimulants, Biocontrol and water soluble and are produced in Atessa, via Cagliari 1, 66034 (CH).

The main product lines in Brazilian production site are: Biostimulants, Biocontrol and water soluble and are produced in Pirassununga, 'Estrada Municipal Fernando Luiz Ladgraf (PNG-060), 700 Bairro Cantareira.

The main product lines in Indian production site are: In organic Water-Soluble fertilizers (WSF), Organic Plant Biostimulants (PBS) and Microbials (Biofertilizers, PGPR Products and Microbial pesticides). All the products except microbial pesticides are developed through in-house research and innovation with GEA power technology Platform.

Italian Local Legislation

The products **Megafol** and **Viva** are organo-mineral liquid fertilizer;

The product **Master 20-20-20** is a compound solid inorga-

The products covered by the study are 12 Biostimulants, 1 water-soluble fertilizer and 1 micronutrient.

nic macronutrient fertilizer, NPK mineral fertilizer with micro-nutrients, 20-20-20;
The product **Ferrilene**, Iron EDDHSA CASn.84539 (CMC1: Virgin material substances and mixtures);
The product **Talete** is an Organo-mineral fertilizer NK 5 in suspension 5-0-6 with micronutrients;
The product **Retrosal**, straight liquid inorganic macronutrient fertilizer;
The product **Radifarm**, **Radifarm NF**, Organic nitrogenous NK 3-0-8 liquid fertilizer;
The product **YieldOn**, Organic nitrogenous NK 3-0-3 liquid fertilizer with microelements;
The product **Vap Full Scale Helena**, Organic nitrogenous NK 3-0-3 liquid fertilizer with microelements;
The product **Kendal**; Organo-mineral fertilizer NK 3.5-0-15.5 in suspension;
The product **Mc set**, liquid organo-mineral fertilizer K 3.5;
The product **Mc cream**, liquid organo-mineral fertilizer;
The product **Mc extra**, Organic nitrogenous fertilizer;
The product **Actiwave**, Organo-mineral NL 3-0-7 liquid fertilizer with Iron (Fe) and zinc (Zn);

Brazilian Local Legislation

In according to local regulation in Brazil, VIVA BR and MEGAFOL BR are fertilizers organ mineral CLASSE "A" (NORMATIVE INSTRUCTION Nº 25 – NEW WORDING) "product that uses, in its production, raw materials generated in the activities agricultural, industrial, agro-industrial and commercial products, including those of plant origin, animal, industrial and agro-industrial sludge from wastewater treatment systems with use authorized by the environmental agency, waste of fruits, vegetables, legumes and remains of food generated in pre- and post-consumption segregated at the generating source and collected by

collection all of them free of sanitary waste, resulting in a product of safe use in agriculture".

The product MASTER 20-2020 is a mixed mineral fertilizer, national legislation is not available, and we refer to the Italian Legislative Decree 75/2010. According to Italy regulation it's a NPK mineral fertilizer with micro-nutrients.

Indian Local Legislation

In according to local regulation in India, VIVA IN and MEGAFOL IN are Biostimulants and soil revitalizer (as indicated in the product label).

The product MASTER 20-2020 is 100% water soluble mixture fertilizers, national legislation is not available, and we refer to the Italian Legislative Decree 75/2010. According to Italy regulation it's a NPK mineral fertilizer with micro-nutrients (as indicated in the product label).

The following table shows the 3 products covered by the Environmental Declaration, while the columns show the parameters relating to the qualitative characteristics:

- NPK formulation matrix (%);
- TOC total organic carbon content (%);

On the other hand, the parameters for humic and fulvic carbon content C-HA+FA and the HR humification rate for Megafol, Master 20-20-20, Ferrilene, Talete, Retrosal, Radifarm, YieldOn, Vap Full Scale Helena, Kendal, Mc set, Mc cream, Mc extra products are not applicable. For the Viva and Actiwave product, these parameters are not reliable and can only be accurately analyzed within one of the raw materials used in the formulation.

Commercial name	Matrice N-P-K	TOC (%) *biological origin	Other parameters (%)
Megafol	3-0-8	9	-
Viva	3-0-8		0,02 Fe
Master 20-20-20	20-20-20	-	0,02 B; 0,005 Cu; 0,07 Fe; 0,03 Mn; 0,01 Zn
Ferrilene	0-0-0	-	6 Fe
Talete	5-0-6	7,5	0,2 Mn; 0,2 Zn
Retrosal	8,5-0-0	2	0,06 Cu; 1,5 Zn
RADIFARM, RADIFARM NF	3-0-8	10*	0,1 Zn
YieldOn (ABUNDIA)	3-0-3	10*	0,5 Mn; 0,5 Zn
VAP FULL SCALE HELENA	3-0-3	10*	0,5 Mn; 0,5 Zn
KENDAL	3,5-0-15,5	3	-
MC SET	0-0-0	10	1,5 Zn - 0,5 B
MC CREAM	0-0-0	10*	1,5 Zn - 0,5 B
MC EXTRA	1-0-20	30	0,3 Cu; 0,8 Zn
ACTIWAVE	3-0-7	12	0,5 Fe; 0,08 Zn

Tab. 1 - Products covered by the EPD and their characteristics.

Products composition

Megafol: Liquid formulation of plant extracts with minerals.

Viva: Liquid formulation of plant extracts with minerals.

Talete: Liquid formulation of plant extracts with minerals.

Radifarm, Radifarm NF: Liquid formulation of plant extracts with minerals.

YieldOn, ABUNDIA: Liquid formulation of plant extracts with minerals.

Kendal: Liquid formulation of protein hydrolysate with minerals.

VAP FULL SCALE HELENA: Liquid formulation of protein hydrolysate with minerals.

Actiwave: Liquid formulation of protein hydrolysate with minerals.

Mc set: Liquid formulation of plant extracts with minerals.

Mc cream: Liquid formulation of plant extracts with minerals.

Mc extra: Solid formulation of seaweed extract

Retrosal: Liquid formulation of minerals and organic matter.

Master 20-20-20: Solid mineral formulation of NPK macro-nutrients with micronutrients.

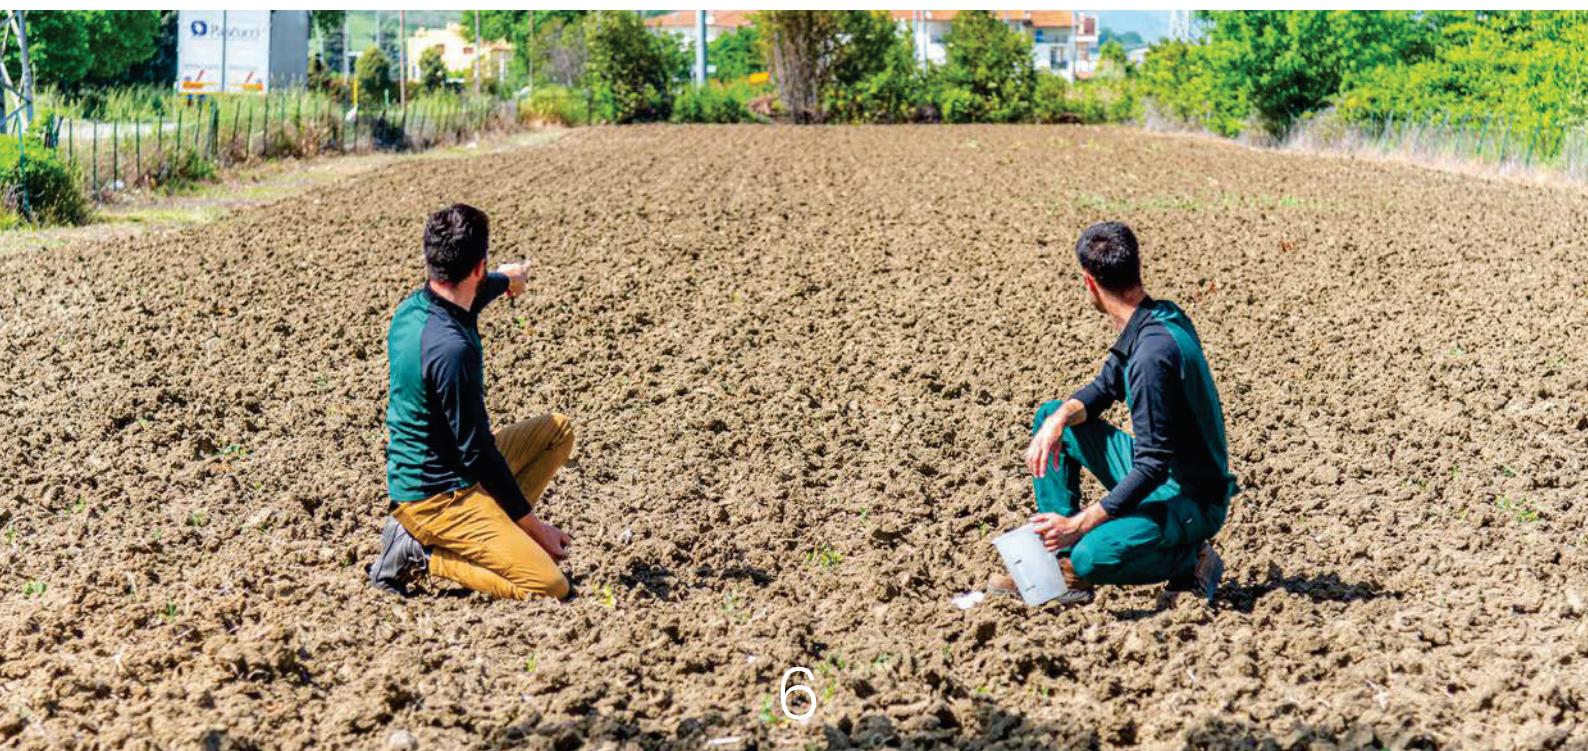

Ferrilene: Solid formulation of Iron chelated.

Packaging

The vast range of Valagro products includes both liquid and solid products and is expected to be distributed worldwide.

The liquid products are packaged in formats ranging from 500 ml to 1000 liters passing through the most common formats which are 1,5-, 10- and 20-liter tanks; moreover, being also distributed in Anglo-Saxon countries, units of measurement such as gallons are also used. The packaging used is made of plastic (HD Polyethylene) and for the 1000-liter format there is also a metal frame.

The solid products are packaged in formats of 1,2,5,10,20,25, 500 and 1000 kg in packaging made of polyethylene and polypropylene.

EPD Declaration

Methodology

The methodology used for the analysis of the life cycle of the products covered by the declaration follows the ISO 14040:2021 and ISO 14044:2021 standards and has used the characterization factors indicated by environdec.com, Version 2.0. GWP100, EN 15804. Version: August 2021; AP, accumulated exceedance, EN 15804. Version: August 2021; EP, aquatic freshwater, EUTREND model, EN 15804. Version: August 2021; EP, aquatic marine, EUTREND model EN 15804. Version: August 2021; POCP, LOTOS-EUROS as applied in ReCiPe, EN 15804. Version: August 2021; EP, terrestrial, accumulated exceedance, EN 15804. Version: August 2021; ODP, EN 15804. Version: August 2021; ADP minerals & metals, EN 15804. Version: August 2021; ADP fossil resources, EN 15804. Version: August 2021; Water deprivation (Available water remaining (AWARE) method), EN 15804. The LCA methodology (Life Cycle Assessment). The study was conducted using the SIMAPRO (PRé Sustainability) software version 9.5.0.0. con Ecoinvent 3.9.1

For the preparation of the declaration and the study of the life cycle, the indications given in PCR 2010:20 "Mineral or Chemical fertilizers", version 3.0 DATE 2020-06-03, CPC Code 3461, 3462, 3463, 3464 and 3465 were followed.

Declared Unit

For all the solid products covered by the study, the declared unit is 1000 kg with the relative packaging.

Flowchart

The life cycle stages included within the system boundaries and the flow diagram are shown in the figure below.

System boundaries

The life cycle analysis was conducted in a spatial horizon that fixed the boundaries of the system by dividing them into three macro-categories:

Upstream module: contains all the processes upstream of the production phase, it analyzes the entire supply chain dedicated to the procurement of raw materials. The processes present in the Upstream Module are the production of raw materials, the production of packaging used to package the fertilizers;

Core module: studies all the production phases of Valagro fertilizers within the company boundaries. The processes included in the Core Module are the transport of MPs and packaging to the Valagro Biosciences Pvt Ltd- India site, the production processes of the fertilizers inside the Valagro plant, the emissions linked to the production processes;

Downstream module: analyzes the phases of Valagro products once they leave the corporate gate, i.e. distribution, use, end of life of the packaging. The processes included in the Downstream Module are the transport of Valagro Biosciences Pvt Ltd- India fertilizers in the country of use, the phase of use of the same and the management of the end of life of the packaging. About the management of waste deriving from the end of life of products, databases present at an international level have been used (OECD, EUROSTAT, UNSD and National Reports).

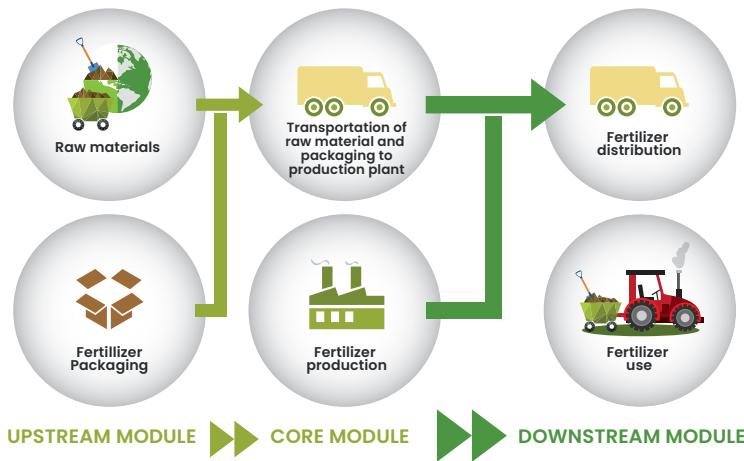

Fig. 1 – Fertilizer Life Cycle System Boundaries

At the Fertilizer Distribution Stage, we have considered every single shipment of the product (recorded by our systems), the Company in general only uses land transport by truck and by sea by ship, no other means of transport are used, and for each of these we have used specific distances by sea and by land calculated with GoogleMaps for distances by sea we have been taken information on routes and ports in the transport documents, each company used at different routes and the ones actually used have been considered.

For the distribution of the product, we can calculate the distances by land and sea from the addresses in the transport documents;

Specific consideration about transportation by land from Indian production site to final costumer

For transport process referred to finish products/raw materials we consider an average value after going through the following considerations:

Local regulation (in India) is inspired by the EUROCODE and the implementation tables timeline show that in 2010 India completed the implementation of EURO 3;

All products produced in India are sold in India, less than 0.1% is exported to CHINA.

Transport, freight, lorry >32 metric ton, EURO3 {RER} | transport, freight, lorry >32 metric ton, EURO3 | Cut-off, U. is the process used on Simapro. The values of NOx emissions comparing Euro III and Bharat Stage III are identical, 5 g/kWh, so the most correct process to use is not EURO3 RoW but EURO 3 RER

Specific consideration about transportation by land from Brazilian production site to final costumer

For transport process referred to finish products/raw materials we consider an average value after going through the following considerations:

- Local regulation (in Brazil) is inspired by the EUROCODE and the implementation tables timeline show that in 2006 Brazil completed the implementation of EURO 3;
- Master 20-20-20,1x25kg packsize has been sold in Brazil for % of 64%, 25% in Mexico, 2% Uruguay and 10% Colombia, All Viva pack-size have been sold in Brazil excepting VIVA 1X10 (CHILE SYNGENTA) and All Megafol pack-size have been sold in Brazil.

The specific process in Simapro is: Transport, freight, lorry >32 metric ton, EURO3 {BR} | transport, freight, lorry >32 metric ton, EURO3 | Cut-off, U.

For sea freight, we consider the same Simapro process for all distributions in the world:

Transport, freight, sea, container ship {GLO} | transport, freight, sea, container ship | Cut-off, S

I am available should you have any question regarding the requested integrations.

Specific consideration about transportation from Italian production site to final costumer

- For transport process referred to finish products/raw materials we consider an average value after going through the following considerations:

The foliar application exploits the ability of plants to absorb water and the mineral salts dissolved in it through the epidermis and the stomata of the leaves.

Fertigation allows the distribution of fertilizers by means of irrigation water.

- The Euro 6 standard in Europe has been in force since 1 September 2014 for the homologation of new models, while it has become mandatory since 1 September 2015 for all newly registered cars;
- Most of the road transport from the Atessa production site reaches a European distribution perimeter.

The specific process in Simapro is: Transport, freight, lorry >32 metric ton, EURO5 {RER} | transport, freight, lorry >32 metric ton, EURO5 | Cut-off, S

For sea freight, we consider the same Simapro process for all distributions in the world:

Transport, freight, sea, container ship {GLO} | transport, freight, sea, container ship | Cut-off, S

I am available should you have any question regarding the requested integrations.

Data quality

For the core module, specific data collected in the field, at the Valagro Biosciences Pvt Ltd- India plant, were used; for the data relating to the Upstream Module, both specific data and generic data were used, based on the Ecoinvent 3.9.1 database, the packaging data was provided directly by the suppliers through specific data and generic data. As regards the data relating to the Downstream module, specific data on distances and generic data on the management of packaging at the end of its life were used. For the use phase, scenarios were modeled, and specific and generic data were used.

The data used refer to the year 2022.

Data on company production and product distribution refer to the year 2022.

The "proxy" data used refer to some of the ingredients of the formulations and do not exceed 10% of the total impact.

Uptake Index

Valagro has been producing solutions for plant nutrition for 40 years and is the world leader in the Biostimulants market. Since 2012, it has launched a process for calculating the environmental impacts related to the life cycle of its products. Over the course of almost 10 years, he has studied the issues related to GHG emissions from cultivation practices and the use of fertilizers and has been able to ascertain that Biostimulants and in general the foliar and fertigation applications of his products represent the most effective and efficient way for the absorption and for the best physiological regulation of plants. This document addresses the methodological and scientific issues related to the quantification of GHG emissions deriving from the use of Valagro solutions and presents the choices and reasons for the same related to the LCA modeling made in the EPD study of which the process certification phase has started.

Agronomic Efficiency Index (AEI) & Uptake Index (UI).

AEI index = (yield nC - yield 0C)/nFU

UI index = [nutrient element up-taken from the cultivation in the fertilized option (kg/ha) - nutrient element up-taken from the cultivation in the unfertilized option (kg/ha)]/nutrient unit (kg/ha) * 100.

The Company has undertaken to carry out agronomic tests but at the moment we do not have specific data available for AEI index and UI index.

A campaign of agronomic trials has been planned and as soon as they are available the results will be reported in the EPD declaration.

FOLIAR APPLICATION

Mechanic process

The foliar application of products (for the defense or nutrition of plants) is a technique of administration of technical means that exploits the ability of plants to absorb water and the mineral salts dissolved in it through the epidermis and the stomata of the leaves. The behavior of the plants and the effectiveness of the intervention varies according to various factors (plant species, age of the leaves, morphology and anatomy, phenological phase, substances used, spraying methods, etc.), in any case it must be considered that plants are naturally inclined to convey mineral nutrition through the roots, therefore the dosages applicable in foliar fertilization are much lower than those relating to ordinary fertilization, although they are very effective. The sprayed product is distributed as follows:

One part is applied to the "target" correctly;

- a part is superimposed on the previous one and is useless or even harmful to the crop;
- a part is lost on the ground;
- a part is lost due to drift (transport of the drops off target) or due to evaporation before reaching the target.

In the case of the application of foliar products, it is known that it is a practice used almost exclusively for the application of phytosanitary treatments. This does not mean that other products (fertilizers, micronutrients, etc.) have been associated with the defense of plants in foliar treatments for decades now, which integrate the defense with "tonics" useful periods of the vegetative phase or in cases of plant stress. For this reason, it was decided to allocate the foliar product application process to 50% (because the remainder is intended for crop care).

Therefore, in the case of Valagro and the EPD certification, it was decided to use the "Application of plant protection product by field sprayer, market for. Allocation def, S", and to use it at 50%. The unit of measure of the process is the surface area. An ad hoc process was therefore created called "Foliar Product application 1 liter - 1.2 kg product (200 liters of water - 2000m²)" in which the process "Application of plant protection product by field sprayer, market for. Allocation def, S".

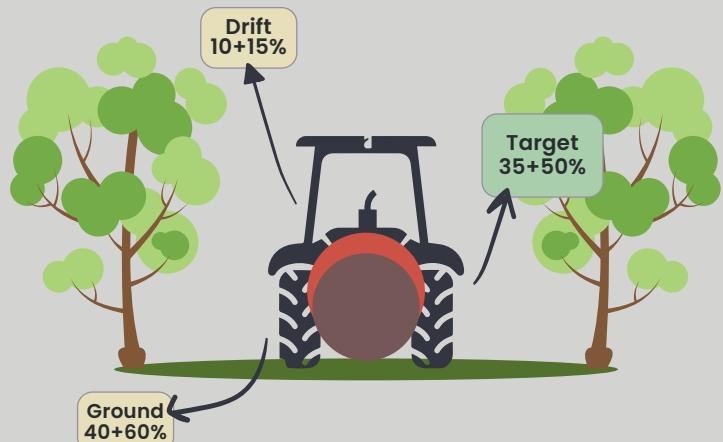

Based on what is reported in the 2020 catalog regarding the use of foliar products (in terms of kg/ha), it was decided to use the process by calibrating it on 1.2 kg of product (1 liter of liquid product) and using 2000 m² of the process "Application of plant protection product by field sprayer, market for. Allocation def, S" and inserting 100 liters of "Water, river, agri, IT" relating to the use of water in the process.

GHG emissions from fertilizers

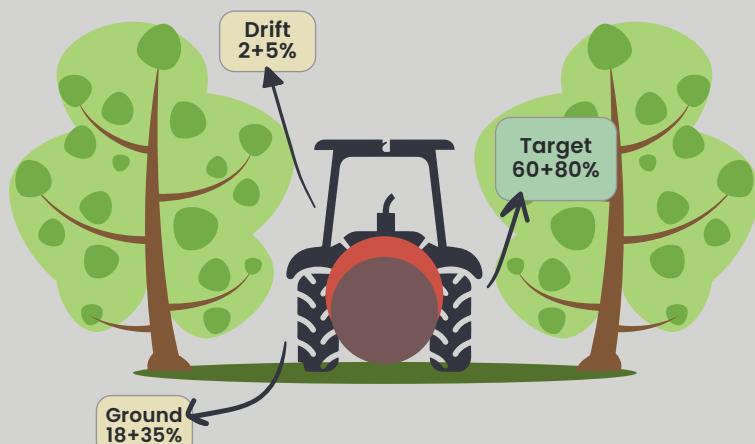

Based on the premises made, it can be asserted that the product that drifts and is therefore not readily absorbed by the plant or the soil varies between 5% and 15%. In this sense, wanting to take the worst route, the GHG emission referred to 15% of the Valagro product used in foliar spreading was evaluated.

Foliar application products are those contained in the latest product catalogue. The list consists of both liquid and solid products which vary over a range of nitrogen content from 0 to 15%. For many of these products, nitrogen is not present and therefore the resulting emissions will not even be calculated and expressed within the foliar application process. For the others, the values present in the table specific to the type of product were calculated and entered, following the calculation indications given in PCR (MINERAL OR CHEMICAL FERTILIZERS, PRODUCT CATEGORY CLASSIFICATION: UN CPC 3461, 3462, 3463, 3464 & 3465).

Early vegetative stages

Full vegetative development

SOURCE: DRIFT EFFECT AND POSSIBLE REDUCTION OF AERIAL LOSSES IN THE DISTRIBUTION OF PESTICIDES. ORGANIZED BY ARPAT, THE REGIONAL AGENCY FOR THE ENVIRONMENTAL PROTECTION OF TUSCANY, AND THE DEPARTMENT OF AGRICULTURAL AND FORESTRY ENGINEERING (DIAF) - UNIVERSITY OF FLORENCE.

Of the products analyzed, only Megafol has a foliar application with the resulting emissions into the air and water:

Prodotto	Foliar (kg)	Total Seasonal Dose (kg/ha)	N % (Nitrogen)	Type	Physical state	Density (kg/l)	Unit Dose	DOSE (kg)	Tot. N gr.	Deriva (Arpat Toscana) (Def. Value 15%)	N (perdita) Deriva	Assimilation average value (PCR Fertilizer Pag 3-14)	Breakdown between the various components	NH3	NO	N2O	Norg	NH4+	NO3-	
Megafol	2	3	9	3	BS	L	1,22	1,22	2,5	0,03660	0,15000	0,00549	0,00038	0,00006	0,00009	0,00013	0,00021	0,00006	0,00010	0,00028

*The dose that is applied of the product is the same for different crops (tomato, cereals and vegetables) as described in the product catalog

FERTIGATION

Equipment used

Fertigation refers to an agricultural technique that allows the distribution of fertilizers by means of irrigation water. This methodology has gained greater popularity with the diffusion of micro-irrigation and/or drip irrigation, in fact, it is preferably applied with localized irrigation and/or sub-irrigation. It can also be done with other irrigation systems, but for a better distribution of the fertilizer the systems are preferred.

The distribution of fertilizers in water improves the absorption of nutrients by plants and at the same time makes the use of water more efficient. In practice, fertigation creates a synergistic effect between water and fertilizer. From what emerges from the dedicated literature, the efficiency of fertigation follows the efficiency of the irrigation systems; in this sense, to date, the application of Valagro fertilizing and Biostimulants products is carried out through drip micro-irrigation systems.

For the modeling of the following operating area, a specific process named FERTIGATION was created, within which the following main processes were considered:

1. Use of the water resource as a vector for transporting the fertilizer to the target plant. The fertigation system was created mainly for the need to irrigate the plant and only at a later stage is it used as a tool for the fertilization phase. The contribution of water that is used in case of simple irrigation or fertigation is the same, this means that the application of the product does not increase the amount of water necessary for the plant. (water and fertigation pipes are considered as infrastructure and therefore can be excluded according to the reference PCR)

2. Emissioni nell'aria di NH3;NO; N2O, sono stati considerati i flussi elementari in atmosfera per i quantitativi riportati in tabella alle colonne "T", "U", "V"
3. Emissions to Norg water; NH4+;NO3- the elementary flows into the atmosphere were considered for the quantities shown in the table in columns "W", "X", "Y".

Emissions deriving from fertilizers

As mentioned in the previous point, reference was made to the irrigation efficiency process to also evaluate the quantity of fertilizer that can be absorbed by the plants. In this sense, the variables involved are many and are mainly connected to the type of soil, cultivation, fertigation system, etc. In any case, referring to what is reported by FAO (<https://www.fao.org/3/t7202e/t7202e08.htm>) it can be noted that irrigation systems basically have these efficiencies.

Irrigation methods	Field application efficiency
Surface irrigation (border, furrow, basin)	60%
Sprinkler irrigation	75%
Drip irrigation	90%

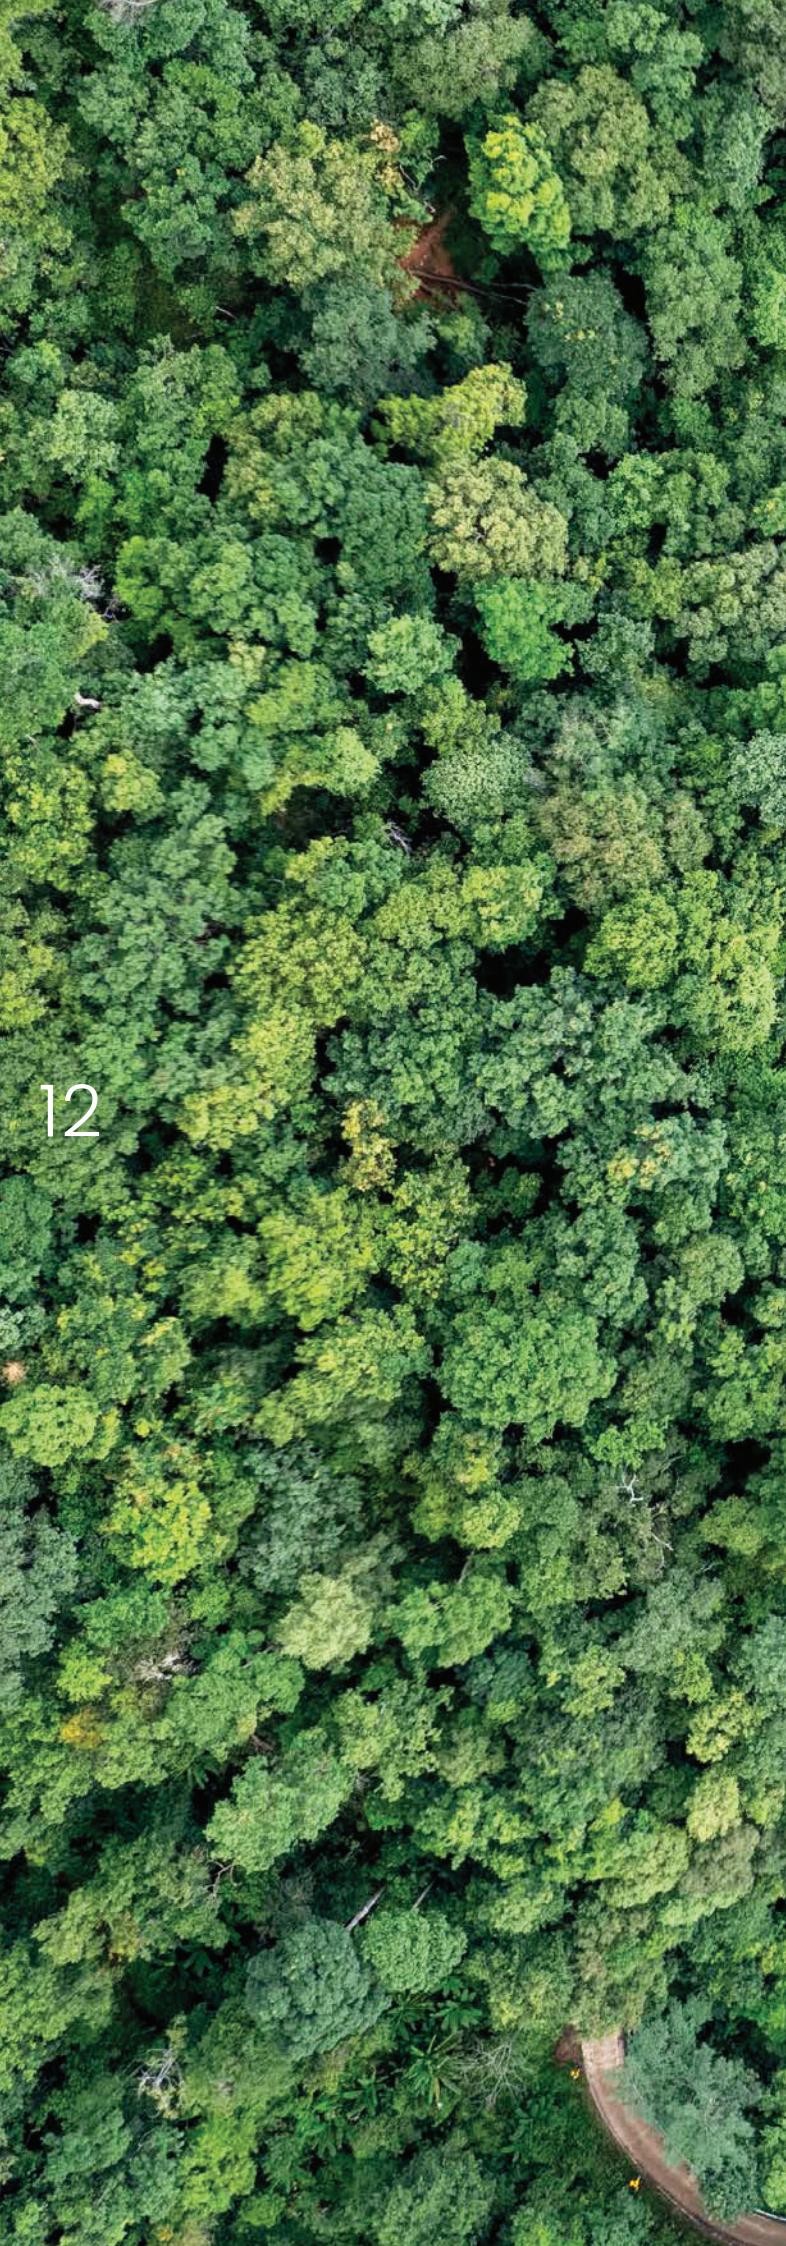

Tab. 2 – INDICATIVE VALUES OF THE FIELD APPLICATION EFFICIENCY (AEI)

The value used in the table for calculating efficiency and therefore the relative emission into the atmosphere is that of drip irrigation, i.e. 90%. Based on that data (10% losses) and referring to the emission coefficients reported in PCR, the quantity of elementary substances reported in columns "T", "U", "V", "W", "X", "Y" of the table "09_dose_uso_prodotto_valagro" was determined.

Of the products analysed, Ferrilene, Viva and Master 20-20-20 are applied by fertigation with the following resulting emissions:

Prodotto	Root (kg - Min)	Root (kg - Max)	Total Seasonal Dose (kg/ha)	N % (Nitrogen)	Type	Physical state	Density (kg/l)	Unit Dose	DOSE (kg)	Tot. N gr.	Loss 10% (Based on FAO report)	N (perdita) Deriva	Assimilation average value (PCR Fertilizer Pag 3-14)	Breakdown between the various components	NH3	NO	N2O	Norg	NH4+	NO3-
Viva	10	30	60	3	BS	L	1,24	1	20	0,03	10%	0,003	0,00021	0,00003	0,00005	0,00007	0,00012	0,00003	0,00005	0,00015
Ferrilene	5	30	45	0	MN	S	1,62	1,62	17,5	0	10%	0	0,00000	0,00000	0,00000	0,00000	0,00000	0,00000	0,00000	0,00000
MASTER 20-20-20	5	15	135	20	WSF	S	1	1	10	0,2	10%	0,02	0,00137	0,00023	0,00033	0,00049	0,00078	0,00023	0,00036	0,00101

*The mean dose was calculated as the average between the minimum and maximum dose of all crops (vegetables, fruits, cereals and flowers) as described in the product catalog.

Emissions deriving from micronutrient use

With reference to the use of micronutrients through fertigation (Fe, B, Ca, Mo, etc) it should be noted that in the modeling processes only the use of water is taken into consideration as a vector element for the transport of nutrients. The choice is motivated by the small quantities used (max 30 kg/ha) and by the frequency of application (once a season).

Information on the REACH Regulation

Information on compliance with Regulation (EC) N° 1907/2006 concerning the Registration, Evaluation, Authorization and Restriction of Chemicals (REACH).

Ferrilene

Chemical Name: Acedite Acid, Oxo-, Sodium Salt, reaction products with ethylenediamine and hydroxybenzenesulfonic acid monosodium salt, iron sodium salts

Type: Substance

Composition: UVCB

Origin: Organic

EC Number: 283-042-4

CAS number: 84539-54-8

REACH registration number: 01-2119946570-37-0000.

**VIVA, MEGAFOL, TALETE, RETROSAL,
RADIFARM, RADIFARM NF, YIELDON,
ABUNDIA, VAP FULL SCALE HELENA,
KENDAL, MC SET, MC CREAM E
ACTIWAVE**

Tipo: blend

Information on the REACH regulation: All substances that enter the composition of the VIVA, MEGAFOL, TALETE, RETROSAL, RADIFARM, RADIFARM NF, YIELDON, ABUNDIA, VAP FULL SCALE HELENA, KENDAL, MC SET, MC CREA E ACTIVAWE formulation are registered or exempt from the REACH regulation.

MASTER 20-20-20

Tipo: blend

Information on the REACH regulation: All substances that enter the composition of the Master 20-20-20 formulation are registered or exempt from the REACH regulation.

MC EXTRA

Name: Ascophyllum nodosum, ext.

Type: Substance

Composition: UVCB

EC Number: 283-907-6

CAS Number: 84775-78-0

REACH registration number: 01-2119575389-21-0000.

THE POTENTIAL ENVIRONMENTAL IMPACTS OF VALAGRO PRODUCTS

(produced in Biosciences Pvt Ltd- Indian site, Valagro S.p.A in Atessa - Italian site and Valagro Manufacturing – Brazilian site)

Below are the tables that summarize the data (relating to 2022) for calculating the potential environmental impacts for the 12 liquid Biostimulants, 1 water-soluble fertilizer and 1 micronutrient solid.

All tables refer to 1000 kg.

For product formats packaged in more than one production site, the weighted average of the impacts was calculated.

Tab.1 – ACTIWAVE, packsize 15x1lt (FU=1t), produced in the Italian site Impact category, resource use, waste, and output flows indicators

Impact category, resource use, waste, and output flows indicators**

PARAMETER	UNIT	TOTAL	UPSTREAM	CORE	DOWNSTREAM
Global warming potential (GWP)	Fossil	kg CO ₂ eq	2091,779	1568,387	144,038
	Biogenic	kg CO ₂ eq	74,142	46,158	1,731
	Land use and land transformation	kg CO ₂ eq	3,760	3,065	0,235
	TOTAL	kg CO ₂ eq	2169,681	1617,611	146,004
Ozone layer depletion (ODP)	kg CFC11 eq	0,000	0,000	0,000	0,000
Acidification potential (AP)		13,505	8,340	0,850	4,314
Eutrophication potential (EP)	Aquatic freshwater	kg P eq	0,335	0,319	0,011
	Aquatic marine	kg N eq	3,078	1,452	0,256
	Aquatic terrestrial	mol N eq	43,361	25,156	2,752
Photochemical oxidant creation potential (POCP)	kg NMVOC eq	8,971	5,338	0,983	2,650
Abiotic depletion potential (ADP)***	Metals and minerals	kg Sb eq	0,022	0,021	0,000
	Fossil resources	MJ	26216,015	22679,061	2046,653
Water deprivation potential (WDP)***	m ³ depriv.	171,209	151,875	10,252	9,082
Primary energy resources – Renewable	Use as energy carrier	MJ, net calorific value	1567,222	1495,549	56,729
	Used as raw materials	MJ, net calorific value	0,000	0,000	0,000
	TOTAL	MJ, net calorific value	1567,222	1495,549	56,729
Primary energy resources – Non-renewable	Use as energy carrier	MJ, net calorific value	28429,068	24664,076	2177,908
	Used as raw materials	MJ, net calorific value	0,000	0,000	0,000
	TOTAL	MJ, net calorific value	28429,068	24664,076	2177,908
Net fresh water use	m ³	35,034	33,118	0,678	1,239
Hazardous waste	kg	1,035	0,096	0,932	0,008
Non Hazardous waste	kg	2832,983	2489,197	167,130	176,656
Radioactive Waste	Kg	0,014	0,013	0,001	0,000
Exported energy Thermal	MJ per energy carrier	0,000	0,000	0,000	0,000
Export energy Electricity	MJ per energy carrier	0,000	0,000	0,000	0,000

*** "The results of this environmental impact indicator shall be used with care as the uncertainties of the results are high and as there is limited experience with the indicator."
