## LCA information

Functional unit / declared unit: Declared unit is 1 piece of Colibri luminaire

Reference service life: 100 000 h aka 20 years (assuming an average working intensity)

Time representativeness: Site specific data from producer are based on 1 year average for process data (reference year 2020). Time scope less than 10-years were applied for background data. Time scope less than 2-years were applied for specific data.

Database(s) and LCA software used: GaBi software, GaBi database and EcoInvent database

Description of system boundaries:

The system boundary is Cradle to gate with modules C1–C4 and module D according to EN 15804 + A2. It covers the production of raw materials, all relevant transport down to factory gate, manufacturing by SIA VIZULO, Latvia, transport of deconstructed materials, waste processing and disposal of used luminaires. The review framework comprises the following details:

- Raw materials acquisition and transport,
- Further processing of raw materials,
- Production operations,
- Energy and water consumption,
- Waste management,
- Packaging of the final product for delivery,
- Transport and waste processing,
- Waste incineration with energy recovery, production of recyclable materials.

More information:

Cut off rules: The cut-off criterion was chosen based on the used PCR. According to the used PCR, more than 95 % of flows were included.

Allocations: All material and energy flows were assigned to one product. Allocation was not necessary. No secondary fuels or materials are used in production. Generic process data for production of input materials and components were used.

Geographical scope: Europe, Global

Electricity consumption: Generation of electricity consumed within VIZULO production was based on the Latvian electricity grid mix.
